

Pre-Summit Workshops

TUESDAY, OCTOBER 10 • 9:00 AM - 5:00 PM

1. EI Assessment Instruments: Exploring the Possibilities with Industry Experts

Gain expert insight on your personal EI assessment!

The highest-attended EI 1999 workshop, this offering has been improved for 2000. Designed to provide a comprehensive overview of the four leading tests of emotional intelligence, the session will cover the EQ-i, the MSCEIT, the ECI and the EQ Map™. Presenters will address the theory, rationale, content, reliability, validity and standardization of each instrument. Additionally, each presenter will share a case study to illustrate how the tests can be used to increase individual and/or organizational effectiveness. The day will close with a panel Q&A and a chance to interact with speakers.

Remember: All Summit attendees are entitled to a pre-session EI assessment, provided they register by August 1. Use this workshop as an opportunity to informally review your EI results with test experts, and ask questions!

This workshop will deliver:

- a solid introduction to the leading EI instruments;
- insight about which instrument best suits your individual and organizational needs; and
- an opportunity to assess your own EI and ask questions of the experts onsite!

RICH HANDLEY is chief, human resource development, U.S. Air Force Recruiting Service. He co-authored *The Last Corporate Secret: Optimizing People*.

DAVID CARUSO is founder, Work•Life Strategies and co-developer of the MSCEIT assessment tool.

BILL TREDWELL is a senior consultant and director of new program and product development for Hay/McBer.

ESTHER ORIOLI is president and co-founder of Q-Metrics and creator of the EQ Map™.

2. Designing and Implementing an EI Program

We all know that EI makes a difference. But how can we design and implement a program using emotional intelligence to create *real* change? What assessment tools, if any, work most effectively? How does coaching support the training process? Is it crucial to link EI training to a business case? And finally, how is a program in EI different from other managerial/leadership programs?

In this very practical workshop, you will learn what is required to design a program in emotional intelligence by "putting it all together" using 360° formalized feedback and state-of-the-art training with individual, one-on-one coaching for greater personal leadership. Based on a case study of the US Navy, Dr. JP Pawliw-Fry will describe key learnings from the implementation of a successful EI training program.

Specifically, participants will discover how to:

- design a program that is truly grounded in emotional intelligence rather than the usual management/leadership development content;
- use 360° EI assessment to build a developmental plan with specific, measurable goals that integrates into a group learning/coaching model; and
- understand what it takes on a personal level to do this exciting and important work.

DR. JP PAWLIW-FRY is co-director of IHHP.com and author of *You Can't Stop the Waves But You Can Learn to Surf - A Path to Emotional Intelligence*. IHHP specializes in designing and delivering programs in emotional intelligence for leaders, managers, sales teams and Olympic and elite athletes. IHHP.com has developed the first train-the-trainer program that integrates a state-of-the-art, web-enabled 360° EI assessment with experiential EI learning. IHHP.com will deliver programs on four continents this year.

3. Renewing the Deeper Self: EI Competencies for a Lifestyle that Works (and Plays) Well

Well-developed EI enables us to recognize and validate our inner processes, empathize and improve communication for personal and professional effectiveness. In the end, who we are and what we value inside often represents the faces we present to the outer world.

In this highly experiential workshop, David Ryback will help you look closer at how you allow yourself to listen to others without losing sight of your own agenda. Following years of research, he will demonstrate the provocative Mutual Affect Parallax (MAP) technique, based on the latest neurobiological findings.

You will learn to:

- identify the brain neurology that underlies the new MAP technique;
- accurately understand and appreciate others' personality traits within minutes of meeting;
- use EI to maximize rapport; and
- identify the five components of personal effectiveness and fulfillment.

DAVID RYBACK is president of EQ Associates International, which focuses on executive coaching and training in the United States, the Middle East and the Far East. He has written more than 60 professional publications and three books, including *Putting Emotional Intelligence to Work: Successful Leadership is More than IQ*.

"I would recommend it to others. Over the years, I've become conference-jaded, and this one truly stimulated my thinking and re-energized me!"

Jackie Bayer,
area director of organization
and employee effectiveness,
Ernst & Young LLP

4. The Physiology of EI: Advancing Emotional and Organizational Intelligence through Inner Quality Management

This workshop will deliver the scientific knowledge and tools to activate emotional intelligence amidst a chaotic environment to improve mental clarity, creativity, decision-making and communication. Through biological research and hands-on exercises, presenters will teach real, working methods to identify and manage emotions, and share the know-how to move these techniques out into an organization.

This workshop will feature cutting-edge hardware and software that monitors the affects of emotional management, as well as tools that actually improve heart and nervous system function (thereby fostering the physiological peak performance that underlies organizational excellence).

This workshop will provide:

- a scientific understanding (explained in lay terms) of how to activate emotional intelligence competencies (such as improved mental clarity, communication, decision-making and planning effectiveness);
- a biomedical mechanism to resolve stressful situations at the moment of perception;
- the capability to create a physiological state of peak performance (enhanced cardiovascular efficiency, immune system and brain functions); and
- a new model of personal and organizational effectiveness.

JOHN WHITE and LISA LEHNHOFF are senior organizational consultants at HeartMath LLC.

JOHN WHITE has been instrumental in the development and delivery of programs for a variety of corporate clients.

LISA LEHNHOFF has more than 15 years of experience diagnosing organizational structures and implementing more effective measures to enhance change and sustain morale, quality and productivity.

EI at a Crossroads: Challenges, Controversies and Opportunities

As emotional intelligence training seeks mainstream corporate acceptance, key challenges loom ahead. In this keynote, *Fast Company* contributing editor Tony Schwartz will moderate a provocative debate about the future of EI. Has emotional intelligence been defined in so many ways, and so broadly, that it risks losing practical utility? Is there a correlation between emotional intelligence and character? Can emotional competencies be taught in ways that prompt enduring behavioral change? Why do so many leaders lack the core qualities of emotional intelligence, and how important will these qualities prove to be going forward?

Through this expert panel discussion, you will:

- better understand why leaders in the field are grappling with the challenge of creating a common definition for emotional intelligence;
- learn how top practitioners are seeking to develop replicable techniques for teaching emotional intelligence, and which ones are working most effectively; and
- discover what corporate clients want from EI training and what they identify as its current strengths and weaknesses.

PETER SALOVEY co-developed the concept of emotional intelligence long before the term gained international popularity. He and John Mayer published the first scientific articles on EI in 1990. His laboratory work explores the way our emotions influence thought, behavior and physical health. Professor Salovey is a professor of psychology and of epidemiology and public health at Yale University, where he serves as chairman of the department of psychology. Recent books include *Emotional Development and Emotional Intelligence*, *The Remembered Self* and *The Psychology of Jealousy and Envy*.

RICHARD BOYATZIS is professor of organizational behavior at the Weatherhead School of Management, Case Western Reserve University. He and Daniel Goleman co-developed the ECI assessment instrument offered by the Hay Group. Professor Boyatzis wrote *The Competent Manager: A Model for Effective Performance*.

KATHRYN WILLIAMS is a founder and principal of KRW International, a premier executive development consultancy serving senior leaders of corporate and non-profit organizations worldwide. In addition to her consulting and facilitation work, she is co-author of the *Consulting Psychology Journal's* "Coaching at the Top" and has recently co-authored an upcoming anthology chapter entitled *Breaking the Boundaries*, which explores the impact of emotions and personal past on individual effectiveness.

RICH HANDLEY is chief, human resource development, U.S. Air Force Recruiting Service. He conducted a study of 1,171 recruiters to profile the emotional intelligence traits of high performers, who were 2.7 times more successful than other recruiters. His EI-related research and profiling initiatives led to a 92 percent reduction in turnover for first-year recruiters and saved \$2.7 million in training costs. Dr. Handley co-authored *The Last Corporate Secret: Optimizing People*.

MODERATOR TONY SCHWARTZ is a contributing editor to *Fast Company* magazine and writes the monthly "Work/Life" column. He wrote *What Really Matters: Searching for Wisdom in America*.

"Excellent! Great, practical application of EI in the workplace..."

Heidi Sandling,
manager, leadership assessment and development,
United Technologies

The Soul at Work: Building Courage, Adaptability, Creativity and Vision

The workplace we inherited from our parents has changed forever. Today's business environment holds more opportunities for creativity, imagination and responsibility on the one hand, yet less security and promise of immunity from failure on the other. But creativity, passion and imagination are qualities that cannot be legislated or coerced; they are found in the territory of the human soul—a territory previously banished from the workplace, where only the strategic parts of ourselves were considered useful.

In this moving keynote, David Whyte will address how to respond to the current call for creativity and passion in organizational life, encouraging attendees to overcome habitual fear and reticence and bring their full, passionate souls right into the office. For when we bridge the inner dimensions of human aspiration with our outer, everyday work, work itself becomes a reward, and not just a means to rewards.

This powerful session will:

- use the insight of great poets and poetry to bring a unique perspective to courage, wholeheartedness, creativity, adaptability and change in the evolving workplace; and
- help you clarify your personal—not organizational—difficulties at work, so you can say what you mean and stand by it.

DAVID WHYTE wrote *The Heart Aroused: Poetry and the Preservation of the Soul in Corporate America*. He works full time as a poet, reading and lecturing throughout the world. Frequently asked to speak in corporate settings, he brings a unique perspective to the process of change, helping clients better understand individual and organizational creativity and apply that knowledge to vitalize and transform the workplace.

As the highest-rated presenter at the 1999 EI Summit, David Whyte returns by popular demand.

Creating an Emotionally Intelligent Culture at ABB

ABB Automation is a Swiss-based, \$20 billion, 50,000-person international engineering and consulting organization. Currently, the company is shifting from a product-based organization to a service-based organization. As such, critical employee competencies include brain power, relationship-building and communication skills. Hiring for these skills is important, but developing and honing them among the existing workforce is imperative.

This means that everyone within the organization must be aligned behind the initiative. Learning must happen quickly and be applied immediately. Behaviors will have to change. The company recognizes that to succeed, it must raise both the corporate and individual EI levels. The task of the ABB Corporate University is to ensure that the workforce is prepared to meet these challenges.

Learn how ABB:

- developed a consistent approach to learning, both electronically and in the classroom;
- integrates Emotional Literacy and Accelerative Learning into program design and delivery; and
- launched new corporate EI-related initiatives with interactive web-communication tools.

CHARLIE JOYNER is manager of professional development at ABB Automation University. The Automation University is the corporate university serving the education and training needs of 55,000 Automation Segment employees and their customers.

JUDITH ORLOFF is president and CEO of Educational Discoveries, a strategic learning and organizational change company. Using the principles of Emotional Literacy, Accelerative Learning, and facilitated consulting tools, Educational Discoveries provides custom-designed learning solutions to Fortune 1000 companies.

shifting gears

THE MIDAS TOUCH

Working in the auto-repair business, Midas Inc. employees have seen their fair share of grumpy, irritated and distrusting customers. But with a new strategic business shift underway, Midas wants to eliminate the contentious relationship that often occurs between car owner and mechanic. The company is moving from being only a muffler and brake repair facility that car owners visit every few years to a maintenance expert having relationships with customers who come in every few months.

The change in focus is "crucial," says Harold Ellis, vice president of franchise support for Midas, which has 2,068 shops in North America. Muffler sales have taken a hit ever since the Clean Air Act resulted in longer lasting exhaust systems, and the company is fighting a growing trend that has customers buying new cars rather than fixing old ones. "The new big thing is maintenance," says Ellis. "That requires moving from a transactional mode to one that focuses on building customer loyalty. The goal is to retain customers for a lifetime. This goal, in turn, requires a culture shift."

Dubbed "The New Midas," this

shift entails a new look, including corporate logo, signage, waiting room design and advertising to showcase the expanded services of air conditioning repair and scheduled maintenance. The biggest challenge, however, lies in changing employees' behaviors and attitudes through a far-reaching culture change initiative: Midas CARES—Commitment, Attitude, Relationship, Execution and Service.

Training at the shop level will be a particular challenge, says Anne Klonsky, director of training. "There has been a history of distrust in the auto repair business. Customers come in with the same feeling they have when they go for root canal work. The customer-employee dialogue starts off badly and often doesn't get better."

To help manage the change process, Midas turned to Boulder, Colo.-based Educational Discoveries, a company that relies on the principles of emotional literacy, accelerated learning and brain research. Educational Discoveries designed a five-step training process for Midas management and headquarters staff, franchisees, shop managers and technical crews. The program began early last year and was rolled out in the top 30 markets by November 2000.

The process entailed an overview of the New Midas culture, the New Midas profitability model, a seven-step sales process, skills for specific business goals like selling scheduled maintenance and building relationships, technical training, an "in-shop survival guide," as well as a focus on the required management skills.

Educational Discoveries' CEO Judith Orloff says the training helps Midas employees understand the emotions of customers as well as their own, acknowledge their mutual fears, be authentic, connect with the customer, and even believe that they can change the way their industry is viewed. Facilitation has been handled by 18 franchisees who received train-the-trainer instruction from Educational Discoveries.

"We didn't plan to have franchisees become trainers," says Ellis. "They volunteered. We even had to turn some down."

So far, so good. Mystery shoppers have been randomly visiting Midas shops not knowing which ones went through the program. In one period, shoppers said they were treated favorably at 100 percent of the "New Midas" shops, compared with only 60 percent at the shops where training hadn't been conducted. —J.B.

CLIENT SITUATION

Midas International was transforming the way they did business, to address changes in the automotive industry and shifting consumer trends. The company had added new products and services, and converted from a transaction-based business to a relationship-based business. Educational Discoveries was hired to develop and deliver the learning strategy to teach the new skills, behaviors, and attitudes to successfully implement “New Midas” throughout the enterprise. Midas’s goals included:

- 10 percent increase in sales and 5 percent increase in net profit
- Courtesy checks performed on 75-100 percent of all cars
- 25 percent customer investment in factory scheduled maintenance
- 18-20 percent increase in average invoices

OUR SOLUTION

Educational Discoveries was hired to develop and deliver the learning strategy to teach the new skills, behaviors and attitudes to successfully implement “New Midas” throughout the enterprise. Each program focused on how its target audience participates in demonstrating and delivering the “Midas Cares for a Lifetime” theme and the “seven elements” of New Midas. It was important to Midas that internal relationships—corporate to franchisees, franchisees to their employees, etc. all become a model for Midas Cares. The New Midas programs, which touched everyone at Midas from corporate executives to technicians at the stores, included:

1. Executive Team—Strategy session to integrate vision and gain leadership buy-in
2. Corporate Training—for all Midas corporate employees
3. Strategy Launch—introducing New Midas for all franchisees and their general managers
4. Sales and Management Training—for all general managers and shop managers
5. In-Shop Survival Guide—Meeting-In-A-Box, delivered by store managers, for all Midas technicians

The programs were rolled out following a Train-the-Trainer for all facilitators involved in delivery of the New Midas training.

RESULTS

The performance metric that is the most impressive is being reported by Midas mystery shoppers. The shoppers don’t know which of the stores they visit have had the training and which haven’t. In one period, the shoppers visiting trained shops reported that 100 percent of the shops were treating them favorably, compared with 60 percent of the shops where training is yet to be conducted.

NEW COMMERCIAL CREDIT PROCESS

CLIENT SITUATION

In 1998, Bank of America introduced a nationwide Commercial Credit Process (CCP) geared to:

- Attract new clients
- Be responsive and flexible to clients' needs
- Efficiently deliver a full array of profitable products and services

The CCP was designed to streamline workflow requiring participation and coordination of multiple organizational units and levels all serving one common purpose:

achieving client excellence. This type of process-centered culture was in contrast to how work had been performed historically, in a functional-based environment. The new CCP demanded that all associates trust and collaborate, take ownership and personal responsibility, and continuously improve the process. For the process leaders, this meant learning new tools, skills, and ways of thinking and acting to create this type of process environment to successfully deliver the desired business results.

OUR SOLUTION

In partnership with Bank of America, we conducted a Needs Assessment and identified the behavioral competencies necessary to manage and effectively lead within a process environment. Then, we designed and developed a four-tiered program approach that provided:

- Identification and resolution of challenges that impedes individual, team, and process performance
- Discovery and experience of function versus process behaviors
- Experience of how to give and receive feedback that builds a culture of trust, equality, and personal responsibility
- Acknowledgement of the residual cultural conflicts and paradoxes affecting the work-teams, resulting from many years of acquisitions and mergers

The rollout of the program proceeded as follows:

1. Executive Launch—Executives attended a half-day overview of the new tools, behaviors, and mindset being delivered in the new CCP training programs.
2. Road Show—Communication meetings about the new process to line managers and leaders
3. Process Leadership—Two-day program for managers and supervisors from cross-functional groups within the new CCP
4. Your Link to the Commercial Credit Process—This one-day program was delivered to all associates affected by the new CCP

In conjunction with the design of this program, EDI trained the bank's team to facilitate and support the delivery of the programs.

RESULTS

Process leaders make the shift from function-based behaviors to targeted process behaviors and immediately apply them back on the job. The programs were so successful that the bank will be using this training design for other process implementations outside of the CCP.

This series of programs have been re-purposed to include other processes in the bank and are still being delivered.

SHARING OUR VISION

CLIENT NEED

Cablevision wants to become the premier entertainment company in the world's # 1 market—telecommunications—and create a dynamic future for everyone in the Cablevision family. It is Cablevision's desire to continue the great tradition of service excellence to customers; keep up with the evolution/competition in the marketplace; and make it easy for customers to be informed and acquire Cablevision's products and services.

Cablevision's Call Centers, until recently, performed the sole function of customer service. The Sharing Our Vision project objective was to transform the Call Centers to a service and sales mindset, requiring a fundamental cultural change.

OUR SOLUTION

1. Building Relationships—One-day program for Supervisors and Managers in the Call Centers, to learn to Connect-Serve-Sell to customers, as well as a model and skills to coach the Customer Relations Coordinators into the new service and sales culture
2. Building Relationships—Six-hour program for Customer Relations Coordinators, learning the Connect-Serve-Sell model and skills for transitioning from an in-bound problem-solving mode, to a new products and services selling mode
3. Coaching for Performance—Two-day follow-up program for Supervisors and Managers, to learn additional coaching, change, team-building, and communication

RESULTS

Sales in the Call Centers increased, in some cases significantly, in the months following the Sharing Our Vision initiative launch.

BUILDING LEADERSHIP EQUITY

CLIENT SITUATION

After the merger between Bank Boston and Fleet Bank, the new FleetBoston Financial organization decided to launch a new integrated culture, new brand, new vision, and a new Leadership Development series. The Learning and Development team began the process by interviewing executives about what it means to be a leader in the new Fleet organization. The desired business objectives for Fleet's Building Leadership Equity programs included:

- Employee satisfaction and retention
- Customer satisfaction and retention (and new business)
- Maintaining/increasing profitability through change
- Developing of leadership bench strength

OUR SOLUTION

Building Leadership Equity (BLE), designed by EDI, is a three-tiered leadership development program. In BLE, managers learn how to develop and coach their people, so that the leader can focus on the business challenges. Each of the levels of the program consists of pre-work, three days of training, with a 90-day break in between days 2 and 3, and interim activities to apply and integrate the new tools and behaviors prior to the final day.

1. LEVEL ONE MANAGERS

- Understand role and contribution to Fleet's business
- Manage performance of team and team members
- Coach team members for development
- Communicate to create an engaged, diverse, and motivated team
- Take ownership of the Fleet Brand and connection to the customer experience
- Proactively manage and delegate priorities
- Maintain balance through constant change

2. LEVEL TWO MANAGERS

- Take responsibility for individual and team contribution to Fleet's business
- Coach team members for development
- Communicate to create an engaged, diverse, and motivated team
- Communicate in all directions and cross-functionally to influence change
- Take responsibility for creating the Fleet Brand experience
- Balance competing interests and demands through empowerment
- Lead team through constant change

3. LEVEL THREE MANAGERS

- Shape strategy
- Communicate to align team to Fleet and functional strategies
- Assume responsibility for creating a productive and diverse team
- Communicate cross-functionally to accomplish desired business outcomes
- Be change agents for the organization
- Take personal responsibility for developing leaders
- Take responsibility for the Brand experience
