

Emotional Literacy Train-the-Trainer

This program was developed to train leaders in our Emotional Literacy methodology. It is based on the idea that people can choose and then model certain desired behaviors. Modeling desired behaviors within an organization inspires and motivates employees to demonstrate personal responsibility and move closer towards the common goal of the team.

We are currently developing a training program for Novations, a PROVANT sister company. The training course, based on the book *Results-Based Leadership*, teaches that effective leadership requires a focus on attributes and results. Leaders first need to identify results, then they can align certain attributes to fit with the desired outcomes. This program will also teach how to re-organize a company so that all systems support this premise. It will guide leaders through a systematic way of installing the principles of results-based leadership within an organization.

Results-Based Leadership

The purpose of this program is for participants to discover and experience the tools, skills, and ways of being necessary to become effective leaders within the new process environment. The courses focus on three areas: end-to-end process view, based on client needs; modeling process leadership behaviors; and team/relationship building and collaboration. Leaders learn the skills of authentic communication, enrollment, common ground, gradient and discovery. They are taught how to model personal responsibility and how to build teams through trust, equality and collaboration. The program helps create work environments based on trust, equality, and continuous improvement. Finally, the course develops world class leaders who deliver results in a process environment.

Process Leadership (Currently being developed for Bank of America)

WellBridge

We designed a four-day course for WellBridge (formerly a Division of Monsanto) called “The Art and Science of Management” which we now deliver as a standard program. We taught participants specific leadership skills and showed them how to apply these skills to achieve their desired goals, both for their teams and the company as a whole. The key to the effectiveness of the programs we delivered to WellBridge was the use of Educational Discoveries’ Emotional Literacy technology and experiential learning model to facilitate behavior changes which were internally driven by the participants themselves. Effective teamwork, new levels of customer service, empowered and satisfied employees have all been direct results of the training programs. Participants have shifted their behaviors to model a way of being that truly reflects the values and culture of WellBridge.

Bank of America (previously NationsBank)

Educational Discoveries has done a substantial amount of leadership work with NationsBank and Bank of America. Our relationship with NationsBank began in 1996, prior to their merger with Bank of America, and continues to grow stronger every year. The work we have done with them centers around dealing with change, the emotional responses to change, and how to create and sustain the behaviors needed in the new paradigm. The bank was faced with several leadership challenges from learning how to become trusted advisors to clients, to merging and growing the corporate culture. We have created numerous programs to help them learn how to align behavior with the organization’s desired results. After one year of training with Educational Discoveries, individuals and groups learned to operate as teams on multiple organizational levels, providing their clients with a “seamless” experience regardless of transitions within the Bank. Our training has helped Bank of America to be able to build relationships as trusted advisors and distinguish itself from the rest of the industry through superior service.

Cargill

In 1994, we designed a program for Cargill, called "Why's Guide: The Human Side of Core Process Re-Design," to teach the process of change; specifically, the human side of change. The need arose from a company-wide core process re-design that was failing due to widespread resistance. Cargill hired Educational Discoveries to train their trainers in facilitating the change process in a way that was both culturally diverse and translatable to different languages. With the knowledge of how to deal with change, Cargill employees were better able to work with each other, suppliers and clients, to build a common purpose, achieve shared goals, sustain urgency and excitement, and create trust. The participants successfully managed the paradigm shift in the organization, from rugged individualism and independent operations to interdependent cooperation and a single, unified financial reporting system.

Ernst & Young

We worked with the Ernst & Young Leadership Development team to help them re-define leadership for the partners. Ernst & Young knows that the leadership of the organization, if it can demonstrate a consistent ownership of results and a shared vision of the future, will create a competitive advantage that is unparalleled in the industry. Educational Discoveries created the context of this program to ensure buy-in and application by the partners.

Mobil EHS

The purpose of our training with Mobil EHS was to help their executive team discover and apply the tools, skills and behaviors leaders use to communicate effectively within a transitional environment. We focused on setting the right context so that the intended message is actually communicated. By participating in this program, leaders were able to commit to the importance of effective communication in a time of transition, to experience the importance of context in successful communication, and to be effective leaders by modeling authentic communication within their teams.

Standard Programs

Model for Change

Whenever people make a change in how they behave, they undergo a process that leads to a new vision of themselves. Educational Discoveries' Model for Change workshop guides participants through the ten steps that create a paradigm shift in a person. After experiencing the Model for Change, participants can manage change more easily, empower themselves and others through personal responsibility, risk new behaviors, and give and receive neutral feedback about behaviors. They can make decisions confidently and successfully, resolve conflict by recognizing when people are in reaction and guiding them out of it, and create a sustainable personal vision.

Mastery of Business Leadership

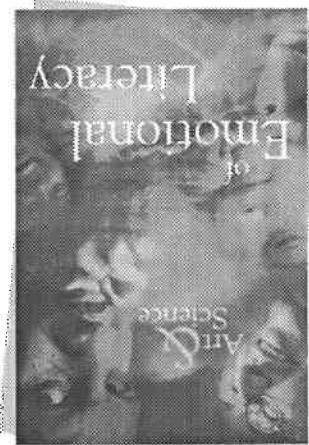

What separates a manager from a leader? A leader models, inspires, and empowers. Business leaders trained in Educational Discoveries' methods are role models and coaches who empower employees to contribute to the company's success. The Mastery of Business Leadership teaches participants what it takes to be a leader in a business setting. This course has seven sessions:

- Vision and Beliefs
- Intention and Motivation
- Communication, Synergy, Integrity
- Process Leadership
- Responsibility
- Empowerment
- Demonstrating Leadership

Strategic Leadership - The Art and Science of Emotional Literacy

This leadership course provides tools to short-circuit resistance and avoid misunderstanding and miscommunication, the common barriers to effective leadership. Active participation and effective feedback spur participants to frame messages that go to the heart of what needs to be said. They learn how to present themselves authentically, build Trusted Advisor relationships with clients and employees, create a safe and open environment, and move people to action. The course teaches Emotional Literacy to all who are, or aspire to be, leaders. It gives people an understanding of how to deal with fear and other emotions that often arise in a leadership setting. The key learning objectives include:

- Learning to achieve desired results
- Eliminating self-sabotage
- Communicating authentically and effectively
- Building trust and creating loyal relationships
- Being comfortable with uncomfortable situations

Art and Science of Management

This four-day course was developed for WellBridge to establish competency in essential management skills. It is an intensive course in skills that get results, using activities designed to simulate the environment of participants' companies. The course teaches the skills of enrollment, common ground, gradient and discovery. Managers learn how to apply these skills along with Emotional Literacy in team building, operations, budgeting, feedback, coaching, prioritizing, conflict management and empowerment.

Custom Design Programs - How We've Helped Other Companies Achieve Similar Goals

Caterpillar Purchasing

The purpose of this training program with Caterpillar was to create a unified vision and mission for Caterpillar's Procurement Department. We worked with their leaders to help them understand and actualize the purpose and value of a centralized, professional procurement process. We used our Visioneering program to guide them through the process of change that was necessary to reach their goal.

Wilcox Hospital

We designed a Two Year Transformation Program for Wilcox Hospital to provide the CEO, senior executive team and selected leaders with the internal and interpersonal skills required for ensuring the optimal demonstration and integration of the new corporate culture they wished to create. Our program for Wilcox utilized a wide range of models and techniques for overcoming resistance, reversing negative patterns, clarifying values, amplifying strengths, and inspiring higher levels of performance. We supported their executive team on the shift of context necessary for corporate culture change by teaching them the principles of personal responsibility and emotional awareness. As a result of the program, the employees took ownership of the cultural shift to personal responsibility.

Vision Quest: Kauai 2000 and Beyond

The goal of this program was to create a shared vision for the future development and support of economic activity on the Island of Kauai. This two day program unified people from every major interest group on the island to create a common vision for Kauai. The most valuable result of the workshop was that "participants experienced overall commonalities existing between different groups originally perceived as adversarial, and everyone was able to work together toward a common goal." Communication was the key to the success of this workshop. The participants were able to express their points of view freely and without judgment, which allowed their true sentiments to surface.

Leadership

Union Central Life Insurance Company

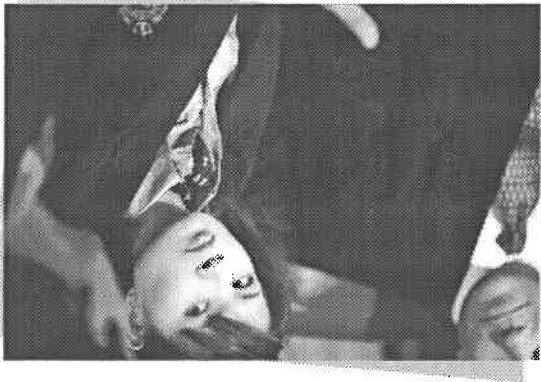

The current corporate culture and operating philosophy at Union Central Life Insurance Company is one of truth, teamwork, respect and caring. The results have been extraordinary. The company experienced major losses in the late '80s, so when Larry Pike became CEO in 1989, he set out to make major changes. He has been successful in leading the company to new heights, both financially and philosophically.

After ten years, and a complete shift in the way the company does business, he's preparing to step down, but not before ensuring that the company will continue to succeed, even after he's gone. Larry Pike wants to leave a legacy of a way of doing business. It's a philosophy that means living by certain core values—humility, integrity, respect for others and a passion for learning and producing. This philosophy creates wealth for the company and adds value to its employees and customers. The company needs to instill those values in all its leaders so that the entire organization is congruent and all members are constantly developing their potential.

Educational Discoveries - Partnering With Union Central Life

Pike's leadership principles have powerful economic applications to the everyday operations of the company. These must be integrated into practical, everyday behavior. It is Educational Discoveries' goal to partner with Union Central Life to accomplish this end.

We would begin by conducting face-to-face interviews with Larry Pike, John Jacobs and their team. The objective of these interviews would be to identify their leadership competencies in order to effectively transfer them to the general population of Union Central. After the interviews, we would work with the team to establish the core content and learning objectives for the

program, incorporating the discovered competencies. Using our Emotional Literacy tools and Accelerative Learning techniques, we would design a program in which Union Central Life employees would internalize and learn to apply the core leadership principles.

What is Leadership?

What does leadership look like? Think about someone you know who you experienced as a true leader. What makes that person a leader?

Is it a physical presence, charisma, power? Is it one's ability to make people follow... or knowing how to get people to do what you want them to do?

At Educational Discoveries, we've been looking at the characteristics of leadership for almost fifteen years. We believe there is a pattern inherent in leadership.

Effective leaders:

- Hold the vision for the organization
- Empower those they lead
- Model the kind of behavior they want to see in their organizations
- Are risk takers
- Know that mistakes are opportunities for learning
- Create environments in which it is safe for people to take risks and make mistakes
- Are personally responsible
- Are motivated by more than just profits

Educational Discoveries' Approach To Leadership

Working with people on issues of leadership often entails changing people's mind-set as well as their behavior. For many people, it requires a paradigm shift, from thinking in terms of power and control to focusing on how their own behavior drives the culture of the organization. If the person in charge believes "people should do what they're told because I'm the boss," that person isn't leading. People will help a leader achieve his or her goals when they hold the same goals, not simply because they are told to do so.

There are many excellent leadership models available, but teaching people to lead by giving them a model to follow is often unsuccessful. Participants in these programs understand the model intellectually and may agree with the recommendations, but they may not experience it emotionally. Some may believe that they are already leaders, thus they feel the recommendations don't really apply to them. What these programs fail to do is teach people to demonstrate and live by the behaviors they want from others. This is precisely the kind of change that Educational Discoveries achieves in its leadership programs.

Educational Discoveries believes that Emotional Literacy is the foundation for true and sustained leadership. Emotional Literacy is the ability to be aware of one's feelings, and through that awareness, more accurately perceive the feelings of others. This connection bonds people more deeply than shared beliefs and ideas.

Increase the impact of your course design and presentations with the power of accelerative learning!

Why Should You Play The Designing Game?

Guaranteed to make training courses the best they can be, this dynamic three-day workshop is where trainers learn to apply the most effective accelerative learning techniques to course design. *The Designing Game* will help you create training that has the longevity and emotional impact of a great work of art—courses that lead to self-discovery. Your employees will become participants, not spectators.

Who Benefits?

The Designing Game is ideal for trainers, program designers, human resource directors, and educational professionals. This workshop is also perfect for anyone who needs to improve existing courses, design presentations, develop new courses, or create an entire program.

What Will You Get?

IN THE DESIGNING GAME, YOU'LL LEARN HOW TO:

- ▲ Overcome employee resistance and enlist them emotionally and intellectually into the learning process
- ▲ Use color, graphics, emotion, music, and drama to enhance learning
- ▲ Ensure each participant has a sense of safety and belonging to the collective training purpose
- ▲ Know when and how to raise the level of intensity and commitment from your group, while maintaining a safe learning environment
- ▲ Surround your content with the optimum emotional and physical space for learning
- ▲ Stimulate both sides of the brain to achieve an overall increase in learning ability
- ▲ Discover how the power of metaphor can simplify even the most complex or technical content
- ▲ Use a story line and setting that will transport your participants from limiting thought patterns, opening their minds to new possibilities

The most powerful learning comes from courses that affect us emotionally. EDI's training stimulates the limbic system (the brain's seat of emotion), to anchor information directly into long-term memory, minimizing the need for study, memorization, and repetition. Our technology is called the Lymbic Training Method. The techniques delivered in *The Designing Game* have made our *Accounting Game*™ the most successful financial workshop in the world.

"A few days after the seminar, I implemented metaphor activities in two separate training courses that we use here at Brush Wellman. The results were astounding! I learned adults like to have fun! When they have fun, they learn!"

~ Howard George
Corporate Manager Training and Development, Brush Wellman

After Experiencing The Designing Game Workshop, You Will Be Able To:

- ▲ Integrate all the tools of accelerative learning to create the optimum emotional state for learning.
- ▲ Know the differences between content and context and how they merge to accomplish learning objectives.
- ▲ Use tools for creating a safe learning environment where participants will take personal risks and be responsible and creative in their work.
- ▲ Use the *Whole Being Model for Learning*, a dynamic learner-based educational model.
- ▲ Recognize and address the fact that there are different learning styles.
- ▲ Unleash the power of interactive learning and teaching strategies.
- ▲ Combine emotional elements in learning activities to anchor lessons into long term memory.
- ▲ Incorporate both sides of the brain in the design and delivery of information.
- ▲ Recognize the positive role stress plays in the learning experience.
- ▲ Amplify information with music, color and graphics.
- ▲ Merge games, metaphors and theater into the learning process.
- ▲ Use props, objects and visual aids to enhance learning.
- ▲ Create self-discovery for any audience through the use of questions.
- ▲ Implement mind-mapping techniques for creative brainstorming.

Day One

Day Two

ACCELERATING YOUR BUSINESS OBJECTIVES

THE ART AND SCIENCE OF LEADERSHIP
 Learn how to touch the hearts and minds
 of any audience, for guaranteed success!

Why should you attend The Art and Science of Leadership?

Do you want to take your career further, faster? The most powerful leaders are those gifted with the ability to connect with others and move them to action. And often, the difference between business success and missed opportunities is the difference between canned presentation and creating relationships. When you "connect" with your clients and customers, they think of you first! You've established a relationship that leads to repeat business.

In *The Art and Science of Leadership*, you'll learn how to recognize your true feelings and avoid limiting behaviors that sometimes stem from them. You'll also learn to transform "negative" emotions, like frustration and anger, into a bridge that connects you to clients, customers, and co-workers.

Who benefits?

Does your professional performance depend on expert communication skills? *The Art and Science of Leadership* is perfect for trainers, presenters, speakers, and educators. But it's also ideal for executives and managers, sales and marketing professionals, negotiators, and others whose success depends on the ability to build relationships with a variety of "audiences."

What will you get?

IN THE ART AND SCIENCE OF LEADERSHIP, YOU LEARN HOW TO:

- ▲ Succeed by letting your authentic self come through in the presentation of your material
- ▲ Deal with fear when it comes up inside you, or your audience, during a presentation
- ▲ Strengthen your relationship with the audience with every mistake you make
- ▲ Answer your audience members' spoken and unspoken questions, so they feel accepted and understood
- ▲ Create an environment of intimacy that opens the hearts and minds of your audience
- ▲ Connect with your audience members so effectively they wish your presentation would never end
- ▲ Move your audience to action

After experiencing The Art and Science of Leadership, you will be able to:

- Connect with any audience and have your message received.
- Use "The Art and Science Safety Net"—the enrollment, common ground, gradient, ritual, and maintain a learning environment to ensure the best results.
- Create and maintain a learning environment to ensure the best results.
- Combine substance, form and essence to create a powerful presentation.
- Recognize and integrate your own emotions and the feelings of your audience to create safety and openness.
- Answer your audience members' spoken and unspoken questions to increase acceptance and understanding.
- Understand the unintentional messages you may be sending that sabotage your communications.
- Create an environment of intimacy that opens the minds and hearts of any group.

Why Should You Play The Financial Game?

During this fast-paced, one-day workshop, you'll learn how to transform your financial statements into powerful decision making tools that will enhance your success and increase your organization's cash flow, profit, and return.

The Financial Game for Decision Making teaches people how to focus on business as a whole and break free from "departmental thinking" that advances one department at the expense of the entire company. By the end of the day, you'll have an arsenal of easy-to-apply analytical tools and the ability to see "The Big Picture." If you're in business to make a profit, you'll walk away with a revolutionary new way for your organization to think and conduct business!

Who Benefits?

This intermediate-level workshop is perfect for non-financial professionals who want to think like senior management, and financial professionals looking for powerful new tools to clearly communicate financial information. *The Financial Game for Decision Making* is ideal for graduates of *The Accounting Game™* and others who understand the basics of accounting.

What Will You Get?

AT THE FINANCIAL GAME FOR DECISION MAKING, YOU'LL LEARN HOW TO:

- ▲ Enhance your company's financial performance by understanding the cause and effect relationships that drive it
- ▲ Understand and communicate that the whole staff is connected to the bottom line, and can contribute to its success
- ▲ See the three financial statements from a big-picture perspective, the way senior managers do
- ▲ Avoid the most common cause of small business failure – low operating cash flow

Do you use your income statement primarily to track profitability? A company can operate for a long time without profit, but cannot survive one day without cash.

Using Educational Discoveries Inc.'s *Financial Scoreboard*, you'll learn that there are three bottom lines, not just one. Once you understand the three bottom lines and the relationships between them, we'll teach you proven techniques to improve all three.

"The packaging and presentation of these concepts is so insightful and clear that newcomers to the ideas and seasoned professionals alike will gain a lot of value for a small investment of their time."

~ Bill Thiers
Senior Financial Analyst, Eastman Kodak Company

Hour 1:	INTRODUCTION OF CASE STUDY METHOD—THE REAL GOOD LEMONADE COMPANY Review Balance Sheet, Income Statement, and Cash Statement Basics
Hour 2:	HOW DO FINANCIAL STATEMENTS FIT TOGETHER? Introduce The Financial Scoreboard Create next year's budgeted financial statements using <i>The Financial Scoreboard</i> (small team exercise)
Hour 3:	CONTINUE SMALL TEAM EXERCISE Do <i>Growing Broke</i> exercise and resolve Learn Operating Cash Flow rules, drivers, analysis tests and real-life example
Hour 4:	ALTERNATIVE PLAN DECISION MAKING RE: PROFIT AND CASH-FLOW Learn small picture measurements for improving cash-flow Receivable days and Inventory days
Hour 5:	APPLY SMALL PICTURE MEASUREMENTS TO IMPROVE PROFIT Cost of Goods Sold/Sales ratios
Hour 6:	RETURN ON ASSETS Buying and payoff of fixed assets Applying small picture measurements to improve ROA Buying Fixed Assets—Payoff benefits
Hour 7:	GOALS VS. STRATEGIES—FINANCIAL PERSPECTIVE Incentive compensation exercise—small picture measures and big picture measures
Hour 8:	FINANCIAL STATEMENT MEASURES APPLIED TO 3-YEAR TREND ANALYSIS Financial strengths and weaknesses of case study company Review, summarize, post-test, evaluation, close

CUSTOM DESIGNED TRAINING
 Attain your business objectives faster
 with accelerated learning!

Why Is Custom Training Crucial?

Educational Discoveries Inc. creates dynamic, interactive trainings that maximize learning speed and retention. Our results-driven training programs are powerful, timely, and cost-effective; they provide your organization the support it needs to reach new heights in training and rapidly attain its business objectives.

We specialize in making complex subjects fun and easy to learn. The world leader in accelerated learning and creator of the Lymbic Training Method, EDI has ensured the rapid, permanent learning of more than 100 of the world's leading organizations.

Who Benefits From Custom Training?

HOW DO YOU KNOW WHEN TO SEEK OUTSIDE EXPERTISE FOR YOUR TRAINING NEEDS?
 ASK YOURSELF THE FOLLOWING QUESTIONS:

- ▲ Do you need to train people quickly and effectively, and have them immediately impact profitability?
- ▲ Are you in need of a new kind of training where participants respond with delight and surprise, rather than report that it was unexciting and irrelevant?
- ▲ Are you finding that your unique industry, firm, target audience, subject matter, or learning objectives cannot be satisfied by any common course?
- ▲ Is your organization less experienced in designing and delivering courses that are highly interactive and fun, and incorporate business simulations, games, multiple-level role playing, and soft skills into hard content?
- ▲ Are your training and design resources committed elsewhere? Is your time to design and deliver short?
- ▲ Do you have a program that delivers a lot of content but doesn't produce the behavior changes you want?

What Will You Get?

EDI training overcomes employee resistance and impacts behaviors that produce profitable results. We focus on the speed and effectiveness of training: how quickly will your employees become productive? How quickly will they contribute to your company's profitability? With your assistance, EDI's Creative Design Team will:

- ▲ Study the content to develop behavioral learning objectives
- ▲ Identify the target audience's resistance and opportunities
- ▲ Quicken consensus among all of the stake-holders on the training goals
- ▲ Test the design before live audiences
- ▲ Train your presenters to deliver it

Whether you need to accelerate an existing course, or have one custom-designed, our advanced educational technologies will provide solutions to your business challenges.

If you want to be successful, you have to be successful at change!

Educational Discoveries, Inc. offers a full line of workshops to guide your organization through successful transitions. These workshops include: The Model for Change,® Conflict Resolution, Vision Quest, Empowerment, Synergy, and Master of Business Leadership (MBL).

TOGETHER, WE CAN:

- ▲ Revolutionize your organization into a company that addresses the underlying causes of its problems
- ▲ Train your employees to be personally responsible
- ▲ Ensure that your people deal with each other and all situations with absolute integrity
- ▲ Guarantee that change is not only accepted – it's embraced

The Model For Change

Is your organization going through change? This engaging one-day workshop helps your employees make change work for them rather than against them. It describes the obstacles individuals face when they move from an established state of affairs to a new one, and reveals the opportunities these obstacles create. It challenges issues of identity, ambition, security, motivation, resistance, and self-esteem. When your organization encounters change, your employees' relationships with each other also change. *The Model for Change* equips them with tools to overcome these barriers, and addresses the human side of organizational change.

Conflict Resolution

Do recurring conflicts lower the productivity of your organization? They should be viewed as a source of creative energy and opportunity. This one-day program teaches the true basis for the conflicts in your organization. Employees learn to be emotionally literate about their own experiences so they can make clear, result-oriented decisions. Conflict Resolution will teach your people a new context which will allow conflicts to be transformed into opportunities for positive change and growth in the workplace.

Vision 2001

Businesses that understand the connection between people's behaviors and the company's vision are likely to succeed. For a vision to inspire, it must be bigger than you or the present state of your company; for it to be effective, your employees must own it and find a place in it that encompasses their own personal purpose. This one-day event is uniquely designed to pull your executive or management team together to create a cohesive guiding vision and mission that your employees will enthusiastically support.
