

Radical Choices

Leadership in Recovery
Using Disruptive Learning Technology™
Participant Workbook
Day One

Agenda

Day One – The How of Leadership Vision and Beliefs

- **The Secret of Powerful Leadership**
- **Purpose and Methodology**
- **How People Learn: Triune Brain**
- **Application Activity: Thumbs Up/Thumbs Down**
- **What Determines the Meaning of your Communication?**
- **The Physical Manifestation of Communication Difficulties**

Day Two – Removing the Blocks to Leadership

- **DLT Feedback: Key to Success**
- **The Reactive Self – Insight into its Origin**
- **The Reactive Self – How to Recognize It**
- **Personal Responsibility**
- **Application Activity: Personal Responsibility Scene Study**
- **Reactions as Pitfalls: Judgment, Interpretation, Projection How to Get Out of Reaction Authenticity**
- **You Always Communicate Your Intention**
- **Integrity**
- **Application Activity: Lack of Integrity**
- **Six Principles of DLT**

Day Three – Getting to the Why of Leadership

- **Cognitive Dissonance**
- **Synergy Game – the Why of Leadership**
 - **Applying Clear Mind to Addiction Recovery**
 - **The Cause of Addiction**
 - **The Value of Resistance**
 - **Purpose and Awakened Action**

Table of Contents

1. The How of Leadership Vision and Beliefs	4
1.1. <i>Vision</i>	4
1.2. <i>Beliefs Create Perceived Reality</i>	4
2. The Secret of Powerful Leadership	5
3. Purpose	6
3.1. <i>Methodology</i>	6
4. Whole Brain Learning: The Triune Brain	7
4.1. <i>Application Activity: Thumbs Up/Thumbs Down</i>	8
5. Presenting Content	9
6. Physical Manifestation of Communication Difficulties	10

1. The How of Leadership Vision and Beliefs

1.1. Vision

Creating a clear and powerful vision of the desired outcome is an essential step toward success for the organization and the leader. The vision and a clear knowledge of current reality enable the leader to identify action steps that will lead to the desired outcome. The leader examines his or her own purpose and vision in the context of the organization's vision and learns how to *embody* the shared vision. By the end of this session, the participants will have created their own vision that is aligned with the organization's and will have an action plan to begin that process.

1.2. Beliefs Create Perceived Reality

Typically, most decisions are made for the sake of survival. We try to make sense of the world around us and fit in with an acceptable level of comfort and safety. Over time, beliefs that were created *as a response* to the outside world can begin to *create our world*. First, we believe what we see, and then we see what we believe. For example, racial or sexual prejudice is based on a set of beliefs. A prejudiced person may be unable to see whom the object of his or her prejudice *really* is, and will actually prevent some information about that person (especially favorable information) from registering. Similarly, negative beliefs about what an "addict" or a customer is make it difficult to manage a relationship effectively.

***"Loyalty to a petrified opinion never yet broke a chain or freed
a human soul."***

Mark Twain

2. The Secret of Powerful Leadership

Your relationship with yourself is the same relationship you have throughout your life. How people experience themselves in your presence is equal to how you experience yourself in your presence.

A hologram of 'your relationship with you' emanates into all of your relationships. What you create in one communication is what you create in all of your relationships. The content of the relationships may be different but you're recreating the relationship you have with yourself in all your relationships all the time. There is no separation. Throughout all of your relationships you are always choosing whether or not to notice and take responsibility. Again, there is no separation.

Your communication on the inside of you is a model for how you communicate on the outside. If you have voices inside of you pulling you in different directions and you allow yourself to go with the voices in any direction at any time, your communication will reflect that. When you go with these voices, your communication is like a kite in the wind.

3. Purpose

The purpose of the program is to teach the concepts and application of the DLT method and to convey key results of authentic leadership and connection, so that you will discover and apply theories, tools, and skills to your organization.

3.1. Methodology

Disruptive Learning Technology is a methodology incorporating our proprietary process for living our 6 Principles of Being: Insight, Personal Responsibility, Authenticity, Integrity, Clear Mind and Awakened Action. The 6 Principles provide a practical approach to human values and awakened behavior and are a complement to any existing Leadership Programs. This course will give you an experience of DLT in Leadership in Recovery.

4. Whole Brain Learning: The Triune Brain

Paul MacLean, Chief Scientist at the National Institute of Mental Health, developed the Triune Brain Theory. Like an archaeologist, he went on a dig, but he explored the brain.

According to MacLean, the brain has three parts - the reptilian brain, the limbic brain, and the neo-cortex. The triune brain consists of:

- The reptilian brain - where the instincts for survival are based. It makes you feel safe. If the reptilian is about our basic instinct, when do you think this part of the brain is used? Does it sometimes affect decisions that determine results?
- The limbic brain - the home of emotional expression, and memory. It is where our emotion bonds with our memory. That is why it is so difficult to make "simple" changes.
- The neo-cortex - the center of intellect and reasoning. This part of the brain wants to solve problems. Can you think of times when you use this part of the brain?

In studying the brain, MacLean discovered something fascinating. In fact, he revolutionized how people looked at information retention and application. MacLean discovered that the whole brain had to be engaged for successful learning and application to happen.

This workshop will engage your whole brain, particularly the limbic region, because the limbic is where emotions and long-term memory reside. Effective ways to use information are learned more quickly this way. To do this, we'll involve the physical and other senses and engage the whole brain, so you embrace the learning and are able to act upon it immediately.

4.1. Application Activity: Thumbs Up/Thumbs Down

- Get into three groups.
- For 5 minutes, discuss what you think the role of a leader is, and chart this.
- Each team will then choose a leader of the team.
 - Their role will be to demonstrate a leadership that will support the vision of the organization.
- Work as a team to plan and create a new strategy or process that is functional and relevant to the organization.
- Identify what the objectives of, or the desired results for, this new strategy or process is: e.g. increased revenue, reduced cost, customer base, etc.
- Present your new strategy/process to the other team(s).

The presenting team:

- Sells the new strategy/process to the other team (Customer results).
- Demonstrates how the organization will achieve its desired results. (Organization results).
- Demonstrates Teamwork (Employee results).

The receiving teams:

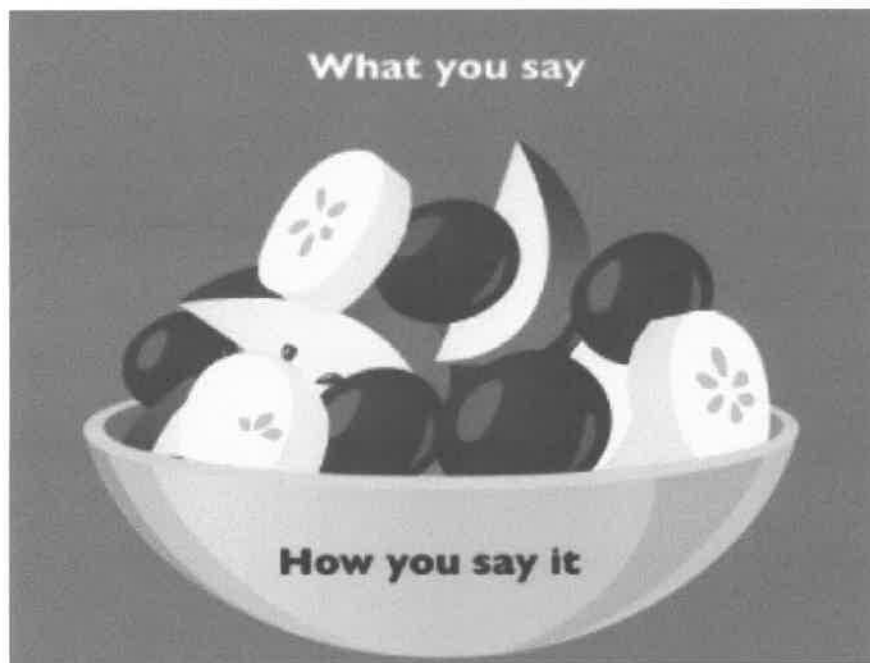

- Evaluate the new strategy/process
- Decide whether they want to implement the new strategy/process.
- Give Feedback to the presenting team and leader

As each team presents their strategy/process, the other teams evaluate the presentation based on the defined criteria to evaluate the three result areas of customer, organization, and employee. They then give feedback to the presenting team.

5. Presenting Content

How you present content determines the meaning of your communication within your organization and to your clients or customers. Many people think that the content of a presentation is what is most important but it is not. The context in which the information is presented is most important. Use the analogy of a bowl of fruit. The information is the fruit; the way it is presented (the context) is the bowl.

How the content is presented will determine how powerful your presentation is. You want to create the context before you do anything else. Some people are geniuses at setting the context and presenting the information at the same time, they don't need to set a context in the beginning of their presentation. This comes with lots of practice.

Any presentation is a very powerful expression of what is going on with you, whether you intend to share yourself or not. You can tell what someone's life is about just by a two or three minute conversation. You are always presenting yourself, whether you're on the phone with a friend, talking with your boss, employees or peers, or selling door to door. The first five minutes you're with someone is when you're making your first impression and the first impression is very difficult to change.

6. Physical Manifestation of Communication Difficulties

The physical manifestation of communication difficulties always happens last.

When communication is out of balance and people are not saying all that there is to say, a lot goes on that is "under cover." When this occurs in a partnership and an organization the very foundation of the relationships and the company is at stake. Success, speaking in terms of finances, sales or production, is the last place that the incongruity in the relationships of the principles will manifest. It could take years to go from initial incongruous communication to manifested problems in the company.

See what your company is really saying to all who touch it -- nothing really goes unnoticed by your co-workers or customers although there may be agreements to not notice things. The relationships cannot be ignored in any way or they will impede the success of the individuals and the company. If a fight for control is in operation between the members of the organization, again, the organization cannot prosper.

Actually, any aspect of a relationship that is "undercover" (not talked about) will grow bigger and adversely affect the company. Reactions not dealt with responsibly begin to fester. When there is a time lag between reaction and correction, you end up dealing in the past.

***Thank you for participating in day 1 of our Leadership in
Recovery Workshop. We enjoyed being with you.***
