THE ACCOUNTING GAME

Instructor
Manual

Intro

Instructor Objectives:

Ability to understand and/or demonstrate the following:

Understanding of:

- Content
- Key learning objectives

Demonstration of:

- The key learning objectives
- Ability to link material in order effectively
- The Transactions
- Ability to enroll audience
- Ability to field and handle questions using FAVOR
- Ability to use props as teaching tools
- Effective use of gameboard
- The use of enrollment, common ground, ritual and gradient
- A partnership between Instructor and team leader
- Sensitivity to what's happening in the room
- Ability to accept emotional state of participants & respond to that instead of reacting
- Ability to treat all mistakes as a learning experience, including their own without judgment
- Ability to give clear, complete instructions
- Accountability and responsibility in all aspects of behavior

What You Do:	What You Say:
Wait for audience response(AR) Put in your own experience in here-personal / sharing	How many CPA's are here today? (AR) Thank you. During the day if questions come up that would have us want to seek the advice of an accountant, would you be willing to offer us your point of view about those questions? Whether you have a background or not, how many people have at least SOME CONFUSION about accounting? (AR) That's interesting, if you look around, almost everyone in the room has at least SOME confusion! Thank you! Well, it's interesting for me to be teaching The Accounting Game because..(your personal story)..... Now, this first 20 minutes will be an introduction. We're going to talk about the intended results, play a warm-up game, take a pre-test, get an overall class average and go over some of the basic rules for playing the game. Our intended result is that you will learn the framework of accounting. You will learn about the financial statements. You'll understand what their purpose is, see how they are structured, and DISCOVER how the different financial statements are related to each other, and you will also learn the basic language of accounting. In fact, we are going to cover one semester's worth of college accounting material in ONE DAY!

What You Do:	What You Say:
Use enrollment mode, raising hands... PLAY off of audience response (AR) This leads to PARTICIPATION Point to sign:  MY SUCCESS IS ABSOLUTELY ASSURED Turn over to a new flip chart page . Write “Success” in RED at the bottom under “To Your...” Point to the word “SUCCESS” (If you don't get much response here, ask 1 or 2 people to respond when you read the flipchart and point to success, and then ask everyone to respond together, and compare the levels of energy in the room-tell them you are looking for high participation. You don't want to insult their intelligence when you ask them to respond to words that they already might know, but by saying the information out loud it further locks in the learning.)	Now, how many people have some DOUBT about being able to do that? (AR) What You Do: We are obviously not going to be able to cover a semester's worth of details. I want to emphasize the fact that we ARE going to cover this material in an OVERVIEW FORM. It's the framework & the big picture that is important TODAY! Does everyone see that sign? My Success is Absolutely what? ASSURED Right. Your success is assured today through your participation. This game is designed so that you will be fully participating with all of your senses. You'll have a gameboard that sits on the table in front of you, with colored game pieces that you can move around so that you will be completely immersed in your own learning process! Our learning methods will keep you very involved and busy during the day. We will talk about our teaching methods a little later. So, for TODAY: Can everyone see this word? What does it say? PARTICIPATION IS THE KEY TO YOUR SUCCESS

What You Do:	What You Say:
This leads into PERMISSION:	Right! Your participation will truly give you the key to your success today. Now, in order to optimize your learning, you may want to give yourself more PERMISSION than you ordinarily would give yourself in a classroom situation: Permission to do what? (AR) Yes! Participate. And since we are playing a game, permission to have some what? FUN Right?! And since you are doing something new, permission to maybe make a few what? MISTAKES Right!
This leads into SIMON SAYS: PLAY mode	Now, we've said that through playing the game you will be using all of your senses. Does anyone know what percentage of information you remember, when you just hear it? (AR) Yes, studies show that at best it's between 10-15%. Now, I have a game to play that will warm you up, engage all your senses, and set the stage for what's to come. The name of the game is Simon Says. How many people have NOT played Simon Says for awhile, in at least 10 years? (AR) I will go over the rules just to refresh you.

What You Do:	What You Say:
PLAY mode throughout Simon Says!	I am going to ask you to make a series of movements with your body, and you don't do anything unless I say what? (AR) Yes, Simon Says! So, if I say raise your right hand, what do you do? (AR) Yes, you don't do it. If I say Simon Says raise your right hand, what do you do? (AR) So you don't do anything unless I say what? SIMON SAYS Does everyone understand the rules of the game? OK here we go. Simon Says the game has begun. Simon Says please stand UP. Now, please move your chairs under your table to make room for everyone to move around..... (Let audience realize on their own that they have made a mistake.) Simon didn't ask you to do that!!!!!! I Know, it's been a few years, right? You can have special Simon Says dispensation just this once. But from now on, if you do ANYTHING that Simon doesn't ask you to do, then you get to what? SIT DOWN That's right! OK so here we go again. SS raise your right hand. SS raise your left hand. Clap your hands. Oh no, Simon didn't tell you to do that!

What You Do:	What You Say:
YOU however, make the motions of bringing your hands down, which fools all the visual people in the room. Lower your voice like your are saying down but you say "up".	Please sit down. Simon Says clap your hands. (Very quickly say) AND AGAIN! Please sit down if you clapped your hands again. OK Bring your hands down! Ah, Simon didn't say do that, so sit down if you brought your hands down. Simon Says, bring your hands down. Simon Says, touch your right ear. Simon Says touch your left ear. Simon Says wiggle your ears! ...(pause).....Stop..... If you stopped, please sit down.....Simon Says Stop!.....Bring your arms down. Ah, you guys are getting pretty smart! Simon Says, Bring your arms.....(paused)...UPI Everyone who took the visual cue, please sit down.

What You Do:	What You Say:
Pick ONE person to single out by name for this next step. Look that person right in their eyes and don't look at anyone else. Keep looking only at that person for the step to the back. You say that as you go over and look right at the name tag with a puzzled look to see if you can trick them by asking a single person and looking them right in the eye. If person doesn't respond with last name say "he/she is a very focused player!" You count all of the people who are left standing, saying we have 2, 4, 6, people, etc.-While you do this you are looking at and motioning for people to come up to the front of the room (they will usually start walking and catch themselves, laughing)	Alright, we still have quite a few people left. SS stick out your tongue. And wiggle it! If you wiggled your tongue please sit down. SS wiggle your tongue.....faster! If you wiggled your tongue faster, please sit down. SS stop wiggling your tongue. Bring your own tongue back into your mouth. If you brought your tongue back into your mouth, please sit down. Simon Says bring your tongue back into your mouth. SS " _____ " take a step to the right. SS take a step to the back. For all of you other people, if you didn't take a step to the back, please sit down! I know, this game is getting a little tricky!!!! Now, we still have quite a few people left in the game. We have Jim and Sally John what is your last name? Simon didn't ask you your last name!!!! Please sit down. SS do not think of pink elephants. No matter what, do not think of Big Pink Elephants. Now, integrity is everything! If you thought of pink elephants, please sit down. This is a very sharp group, so lets have..... Let's have all of the winners come up to front of the room.

What You Do:	What You Say:
This is a sure way to get people out....PLAY with them Again pick ONE person to single out by name. Start clapping-audience will follow, usually people will go and sit down. They forget that Simon hasn't said to sit down. PLAY with them. If there is still someone left, you can acknowledge them as well with clapping. They usually will forget and start to sit down. If you still have a winner say "Simon Says the game is over! Let's acknowledge the winner!!!" Clap.	SS let's have all the winners come up to the front of the room. (pause)...AND face the audience. If you are facing the audience right now, please sit down. Simon Says please face the audience. SS don't smile. Smile! Simon Says smile! Simon Says do not breath. (pause) Breathe! Simon Says breathe! Simon Says take a deep breath. SS take a deep breath. REPEAT! Exhale!! Simon Says exhale! Simon Says _____ take a step forward. Simon Says take a step back. Those of you who didn't take a step back please sit down. OK we have ____ winners. Simon didn't say that the game is over!

What You Do:	What You Say:
Turn flipchart over.	Now, WHY play this game??? It does have a point besides being fun, and the point is : How many people made a mistake playing Simon Says? (A/R) What is the value of mistakes in life?.....audience response...(YOU LEARN FROM THEM)...Yes.. That's what we want you to do in The Accounting Game. You will probably make a few mistakes and we want you to convert them into...What?...(Aud Resp.)...Learning Experiences....How many have had your greatest learning when you've made your biggest mistakes? We call those Great Moments and maybe we will have some of those today. Great Moments

What You Do:	What You Say:
Turn flipchart over to PR Turn flipchart over to big question mark. PLAY - put out a \$100 bill	MISTAKES LEARNING EXPERIENCES SO, to truly learn from our Mistakes, we need to take a step back and see our mistakes in a way that would allow us to really learn from them. Then our mistakes become learning experiences. For me, when I can truly learn from a mistake it's because I have taken Personal Responsibility for what happened. Here's an example of what I mean by Personal Responsibility: Remember back when you were a kid in school and you had a question, and often you didn't ask the question because you thought it was what kind of a question? DUMB Right, dumb or stupid. And what happened to your ability to learn at that moment when you didn't ask the question? IT STOPPED Right? Now, if you take personal responsibility for your own learning, when you have some confusion what you'll do is raise your hand and ask what? QUESTIONS Right! I have an incentive for you to ask questions: What do I have here? (go to a participant) Yes, it's a \$100 bill...(ask someone else) Does this look like a \$100 bill?... (to someone else) Does it feel like a \$100 bill?...(to someone else) Does it sound like a \$100 bill?... (to someone else) Does it smell like a \$100 bill?

What You Do:	What You Say:
Put money on game board. PLAY Place sign on board: THERE ARE NO DUMB QUESTIONS 	I will pay anyone in this room \$100 for any DUMB QUESTION that you have!!! If you can ask what kind of question?....Dumb My goal is that we'll all play full out 100% and go for the \$100 all day long.....This is a very old \$100 bill, so what do we know about dumb questions...That's right, there are no dumb questions!!!! But you never know, today might be the day!! And guess who's the judge? What will make us all successful today, is giving ourselves permission to participate, make some mistakes, ask questions, and be fully responsible for all of our learning. Today, we'll do this FASTER and with more FUN than you would in a traditional seminar setting. Now, if you do this, we guarantee that you will experience a quantum leap in your ability to discover everything you need to know about the basics of accounting.

What You Do:	What You Say:
RULES OF THE GAME At flipchart. Team Leader rings bell.	They say all games have to have rules, so we've got a few rules: 1. We would like for you to direct your questions to me. That way I can be sure that everyone has heard the question and all of us can learn the answer together. 2. The second has to do with our time agreements. The morning session will end between 12 and 12:30. We will take an hour for lunch, and the day will end no later than 5:30. Let's look at some typical learning sessions, Many seminars begin by the speaker telling a joke which you are awake for, but you immediately go to sleep. Then, a half hour later, there's another joke and you wake up, but immediately fall back asleep until it's break time. If the course is really bad, you come in, the speaker tells a joke, you go to sleep, and stay asleep until lunch time. At the Accounting Game, we will tell a joke, you'll try to go to sleep, but someone will go for the \$100 bill and that will wake everyone, we'll move some game pieces, have a question, move more game pieces, and then take a break. So we intend to keep you alive, awake, and participating a lot more of the time than in typical lecture type programs. How long you do you think people can remain alert in a learning session? Our learning sessions will be 50 -60 minutes approximately. At the end of that time period, we will take a 10 minute break. There will be refreshments, etc., outside. After 8 minutes, you will hear this sound (pause for bell). That means we will start the next session in 2 minutes.

What You Do:	What You Say:
PRE-TEST Wait until most are done, announce that they have one more minute to finish.	3. Since we have the game boards and pieces, we ask that you keep all the refreshments out of the room, and only in the break area. 4. We are going to do some breathing exercises. How many of you breathe on a regular basis? How many are actually doing it right now? I'm going to stop occasionally and ask you to take a deep breath, Let's all do that right now. Now, why do that? (A/R) To relax, focus attention, and take the learning deeper! Which part of the body uses the most oxygen?...THE BRAIN....right....So we will use the breathing exercises to keep your brain energized all day. Those are the rules of the game. Is everyone willing to do your best to play by the rules? Now, before we teach you any accounting, I want to find out how much you already know. We are going to do this with a pre-test. If all of you will open your books to the front, you'll find a pre-test of ten multiple choice questions. Please put your name at the top. I am going to divide the room in to sections (A, B, C). Please write your section and row number above your name. Answer these ten questions by circling the letter that correctly answers each question. There is only one right answer. Please do not guess at the answers. If you don't know, just leave it blank. Please pass the pre-tests to your left in you section and for each person, put yours on top of the pile so they remain in order. We will give these back to you at the end of the day after you've answered the questions again. You will be able to see how much you've learned during the day.

What You Do:	What You Say:
Let them tell you what they want to learn and acknowledge what is in the course and what is not. Wait for "At the Hop" Insert your nickname. Introduce team leader, other assistants, wizard, etc. by their nicknames. Let them write names. Introduce a few names and say that you will introduce all the new nicknames in a few minutes.	What specific things have you come here to learn today about accounting? Let's get to know our neighbors. Everyone turn and shake hands with the people sitting beside, in front of and behind you. Now we all know each other. In just a moment, we are going to play a tape on the sound system that tells you a story with important information for you about playing the game. We're going to ask you to close your eyes during the tape. We will be changing the room as you listen, so if we bump you or your table, just consider that part of the experience. At the end of the tape, I will ask you to open your eyes. Please do not open your eyes until I say so. So... get comfortable in your chairs, close your eyes, and listen. Snap your fingers or clap your hands, then open your eyes. Welcome to The Accounting Game! As you can see, I'm going to be _____ and I've got some friends here. Their names are _____. ... How many of you had a nickname as a kid? How many hated their nickname, but had a buddy with a nickname you loved? Now's your chance to give yourself that nickname you've always wanted. Everyone look at the baskets on your table and get a black magic marker, and hold it up in the hand you normally write with. Now switch hands. Next, get from those baskets a yellow name tag, and using the opposite hand, write that nickname you've picked. Write it big, so I can read it, because that's your name for the day, unless you decide to change it. You can peel the back off and put the new name tag on your shirts, sweater, etc. beside your other name tag.

What You Do:	What You Say:
Get someone's scorecard and hold it up. Hold up colored game pieces. PLAY with the audience. Make contact with each participant as you walk the rows introducing them. Don't wait for everyone to finish tearing out pieces. After a reasonable amount of time, say:	Everyone turn to the back of the notebook and tear out the two cardboard pages. One is the gameboard and the other is your colored game pieces. Now, get this out. It's folded. Fold it the opposite way so it lays flat on the table, and place it like mine is up front with the small boxes on the left. Next, these are your colored pieces. First, tear off the white border. Then, tear out all the little pieces, and put them in number and color coordinated piles around the scorecard - not on it. As you do that, I'm going to walk around and introduce all the new nicknames. I'm going to give you another minute to get as far as you can with tearing out the pieces. Now please just stop where you are, there will be plenty of time to finish tearing those out if you haven't done so already.

THE ACCOUNTING GAME

Instructor

Manual

Level

1

Game Context:

- Enroll people to participate through game scenario and role playing
- Demonstrate Left Brain/Right Brain theory of learning
- Teach people how the scorecard is structured and how it works.

Game Content:

After completion of Level 1 instruction, participants will be familiar with the following:

Accounting Concepts:

- Concept of Balance Sheet - purpose & structure
- Balance Sheet as "Snapshot in Time"
- Basic Accounting Equation:
- Assets = Liabilities + Owner's Equity
- Concept of Income Statement - purpose & structure
- Income Statement as "Motion Picture"
- Connection between Net Profit (Income Statement) and Earnings Week to Date (Balance Sheet)
- Beginning & Ending Inventory

Balance Sheet Elements:

- Assets
- Cash
- Earnings Week To Date
- Inventory
- Liabilities
- Notes Payable
- Owner's Equity
- Retained Earnings

Income Statement Elements

- Sales
- Cost of Goods Sold
- Gross Profit
- Expenses
- Net Profit

Participants will complete the following products:

- 6 Balance Sheets
- 1 Income Statement

What You Do:

STEP #1

Get Piggy Bank

Shake \$2 out of piggy bank - Be playful.

Exchange for dollar bills.

Put real \$1 bills up onto left side of gameboard, next to top left corner of grid.

Show, explain \$2 from piggy bank.

Put up 2 green Ones on board.

	①	①		

What You Say:

Remember back in time, when you got the flash to start your very own lemonade business and you ran into your bedroom and shook out all the quarters and nickels and dimes from your piggy bank?

You had how much money in the piggy bank to start your business? **TWO DOLLARS**

I'm going to convert that change to two \$1 bills. This cash is really in my cigar box, but I'm going to put it up here so we can see it.

And what do we call that two dollars? **CASH**
What color is cash? **GREEN**

Okay. So take two green Ones and put them right here on your scorecard. Right now you'll have to trust me on placement. We'll explain why we're putting things where they are on the scorecard as we go along. But right now, we're just building a foundation.

And what do we call this? **CASH**
Now we see a box here which means we have to label this.

What You Do:	What You Say:
Hold up CASH label for everyone to see. Put CASH label up on board.  DISCOVERY!! Identify and explain scorecard. Gesture with imaginary black crayon. Gesture on game board. 	OK. Look for the green game piece that says CASH and put it on your game boards. So what is that \$2? Is that the cash we used to start the business? We wanted to keep track of things happening in our business, so we created a what? RIGHT! A SCORE CARD! Now, this is our scorecard. Remember when you created a scorecard to keep track of all the things happening in your business? We took out a big piece of white paper and with a black crayon, drew a line down the middle. We said the left side was going to represent what? WHAT WE HAVE AND USE! That's right, the left side is going to represent what we have and use in the business. And the right side of our scorecard is going to represent what - does anyone remember? WHO OWNS IT.

What You Do:

Identify who owns \$2
Put up 2 black Ones

Hold up **ORIGINAL INVESTMENT** label for everyone to see and place it on the game board.

What You Say:

So we start the business with how much cash? \$2
And who owns that \$2? **WE DO**. Put up two black Ones.
Is that the money we originally used to start our business? **YES**
(Wait for the question, "Why did you put it there?")
Oh, _____ wants to know about why we placed the number here. Where would you have put them, _____? Up top beside the 2 green Ones? **YES** Maybe you will win the \$100 bill if that's a what kind of question? **DUMB** But wait before we give _____ this \$100, was there anyone else in the room who had that same question and just didn't ask? Ah, _____ you weren't alone, so I guess it's not a dumb question, and you don't win the \$100. For everyone else, the next time a question like that comes up, what are you going to do?
Raise your hand and ask!

Now, there is a reason we placed the two black ones there. I think it will become obvious when we go to the next step. So, _____, would it be okay with you if we wait one minute to answer that question?

What do we call our money that we originally invested in our lemonade stand?

ORIGINAL INVESTMENT. Right! Original investment.

And for how much? **TWO DOLLARS**

What color is Original Investment? **BLACK**

How much is on the left side? **TWO DOLLARS**

How much is on the right side? **TWO DOLLARS**

Does the left side equal the right side? **YES** We now know an important rule about our scorecard. The left side will always, always equal what? **THE RIGHT SIDE**

What You Say:

Ask for someone to volunteer to be Mom.

Give her \$5 to hold onto while you play.

PLAY with Mom (allow plenty of space for Mom and to play with her)

Mom loans you \$5.

Bring in \$5 **CASH** game piece onto left side of board.

[illegible]

Please Take a deep breath

Now. You suddenly realized that \$2 wasn't going to be enough to start your business.
So who do you go to? **MOM**

This brings us to a place in the game where we need our first player. Who would like to play the role of **MOM** for the day?

Oh, great, hi _____, you'll be my mom? Well, how are you mom?etc.

So, Mom, will you give me \$5?

Now is Mom going to give me \$5? NO

Right, but she'll loan it to me.

So, Mom, will you loan me \$5?

Let's all give Mom a big hand. Don't we have a great Mom?

Let's reflect on our scorecard what happened!

What comes in? \$5 in CASH

Who owns this \$5? MOM DOES!

What You Do:	What You Say:
<i>Take a deep breath</i> DISCOVERY!! (This is a choice for use where ever you want in level I to positively reinforce learning.) SCOREKEEPING IS FUN, EASY + CREATIVE! Point to sign on your gameboard. PLAY Show people cash on game board. Physically draw a line with your hand. Pretend you are using a black crayon.	Please Take a deep breath. Now what does that sign up there say? SCOREKEEPING IS FUN, EASY and what? CREATIVE! So, we've got the left side which now represents what we have and use... and what do we have? CASH And how much cash so far? SEVEN DOLLARS So here's the cash \$7. And on the right side, who owns that cash? You own two and Mom owns how much? FIVE So the left side represents the things we have and use in the business. What do we call the things we have and use in the business? ASSETS, Right! Now the right side represents who owns those assets. And on this right side we're going to divide our scorecard in half right here with our black crayon. So make an imaginary line right here. This \$5, do we owe this to Mom? Are we liable to her for \$5? The people that we owe money to or that we are liable to are called what? LIABILITIES So what do we call this section of our scorecard? LIABILITIES

What You Do:	What You Say:
Physically use hands and motion to upper right side of game board. Physically use hands and motion to lower right side of game board. Acknowledge and repeat all answers as you draw the audience response out! Get orange tag. Review Assets, Liabilities and owner's Equity Label top of scorecard (Left side = Assets; Right side = Liabilities + Owner's Equity)  Repeat out loud. Introduce basic accounting equation.	The upper right side represents the people that we owe money to, ... or that we are liable to ... is called what? LIABILITIES Right, this whole top right is called Liabilities. What color are Liabilities? PINK And down here, the two black ones represent what we used to start the business, our Original Investment. So this lower right side represents the part of the business that who owns? WE DO What do we call the lower right side? ... (Aud. Resp.)... EQUITY, OWNER'S EQUITY... Yes and there are some other names you may have here this section called. Anyone know and other names? ... CAPITAL, STOCKHOLDERS EQUITY, NET WORTH. Are they the same thing? YES And for the game today, we're going to call this lower right side Owners Equity. What color is owners equity? BLACK So, the right side has two parts and what are they? LIABILITIES, which is what color? PINK and OWNERS EQUITY, which is what color? BLACK Now, you've got an orange tag among your game pieces; take that and put it right on the top of your game board. Now make sure that it's set up right so the Assets are just on the left, Liabilities and Owner's Equity are on the right. So our Assets=Liabilities + Owner's Equity. This is our basic accounting equation that we will be using all day. Let's get familiar with it and all say it together. Assets = Liabilities + Owner's Equity OK, so how much do we have in assets? SEVEN DOLLARS How much do we have in

What You Do:

Discovery!!

Get toy camera.

Play with camera and take photos of three or four people, calling out their names, i.e., "Hi, J.P., Hi Scooter, Hi Buffy..."

Snap camera and take snapshot as you say, "Right now!"

Get your own game book.

Read Number 1 out loud.

Take a deep breath

What You Say:

We've set up our scorecard so that the left side **ALWAYS, ALWAYS, ALWAYS** equals what? **THE RIGHT SIDE!** Right!

Isn't this a great score card Mom? We're so proud of how we set up our scorecard, I want to take a picture of this and put it in my scrapbook.

Now, let's take a snapshot of our scorecard.

But first, I'd like to get a few pictures of everybody

So, we're going to take a snapshot of our scorecard. What period of time does a snapshot record? A **MOMENT** Snapshots show us where we are when? Right...now!

Everyone get out your Imaginary cameras and take a snapshot of your scorecards with me—when is it good for? **RIGHT NOW**

Now, if you will open up your game books to page 3.

We'll ignore the definitions, those are for later. We're kids and we don't care about definitions, so we'll just ignore the left side of our books for now.

Turn to the right side, Number 1. "You invest two dollars in the business, and you borrow five dollars from your Mom." Your scorecard now shows:

Okay. We are going to take that snapshot and paste it into our game books.

So, total Assets would be how much? **SEVEN DOLLARS**

Total Liabilities and Owners Equity are how much? **SEVEN DOLLARS**

Does the left side equal the right side? **YES!** Good Job!

The left side always equals what? **THE RIGHT**

Everyone, take a nice deep breath.

What You Do:	What You Say:
Step #2 Read out loud. Play with mom! Stop (after Total Cost of Goods = \$6.00) Demonstrate with audience. Ask for a volunteer grocer and Play Take \$6 off of game board, pick up lemons & sugar and go to the grocer. Give grocer lemons and sugar. Buy lemons and sugar from the grocer and give the grocer the cash. 	Step # 2 Drop down to Number 2. *You now need to purchase the following, so go ahead and fill this in: Fifty lemons, at ten cents a lemon would cost how much? FIVE DOLLARS Five pounds of sugar at twenty cents a pound would be? ONE DOLLAR. Two gallons of water. How much?...NO CHARGE... Mom has a heart, so she gives you the water for free. So the total cost of your goods, which is for your lemonade, cost you how much? SIX DOLLARS So let's demonstrate this: OK, we go to the grocer and take how much cash? SIX DOLLARS We are now ready for our next player. Who wants to be our grocer for the day? Hi ____. What's the name of your grocery store? ... My mom has been buying groceries from you for years - and I'm going to start my own lemonade business. Great idea huh! I need some lemons and sugar to make lemonade. I need 50 lemons - how much are they? .10 each? O.K., so you need \$5 and how about sugar? \$1 for 5lbs.? O.K., so here's another dollar. Thanks a lot. Will you come by my stand and buy some lemonade? Let's give the grocer a big hand. (...Role play with grocer - remember, you are about 8 years old! - Ask the name of the grocery, etc. - Buy everything and ask him/her to come on down to the stand to buy some lemonade after work.)

What You Do:	What You Say:
Explain how Scorecard works: (Your business is the scorecard, rest of world are the game pieces.)	OK, so let's demonstrate what we just did on our scorecard. Your scorecard represents your lemonade business. It shows all the things and people you currently have in your business. Now the table around where your game pieces are, is the world. And out there is the grocer and your friends, your mom, your customers and everybody you're doing business with. So all day we'll be moving game pieces on and off the board or in and out of your business, as we do business with the outside world.
Demonstrate on game board.	OK, we went to the grocer with \$6, so let's demonstrate that.
Take \$6 CASH out.	How much cash goes out? SIX DOLLARS

What You Do:	What You Say:																								
Add yellow Five and white One <table><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr></table>																									And what comes back into the business? LEMONS What color are lemons? YELLOW So get your lemons. How many lemons? FIFTY Equals how many dollars? FIVE DOLLARS Get your yellow game pieces What else? SUGAR What color is sugar? WHITE How much sugar? ONE DOLLAR Get your white game pieces
																									
																									
																									
																									
																									
Hold up your INVENTORY LABEL for everyone to see Add INVENTORY label <table><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr></table>																									And what do we call lemons and sugar in our business? INVENTORY! Right, Inventory! Put up your inventory label.
																									
																									
																									
																									
																									

What You Do:	What You Say:
Take a Snapshot (click camera) Record in game books. Bring audience back with deep breath! Review: Left side= right side?	Look what happened. Our cash of \$6, just turned into what? \$6 worth of lemons & sugar - \$6 worth of Inventory. So we exchanged one asset for what? FOR ANOTHER! Right! Has anything changed on our scorecard? YES! So we need to take another what? Right, Snapshot! And a snapshot is good for when? RIGHT NOW. Okay, let's record our picture in your game books under number 2. Go ahead and fill it in. Please Take a deep breath What are our total Assets now? SEVEN DOLLARS And total Liabilities and Owner's Equity? SEVEN DOLLARS Does the left side equal the right side? YES! Good job! The left side always, always equals what? THE RIGHT

What You Do:	What You Say:
TAKE FIRST BREAK DEMONSTRATE break ritual as describe.	BREAK #1 "We've now completed our first sixty minutes and it's time to introduce a ritual that we use at all of our breaks, Everyone please stand and don't leave yet. We give you lots of information each hour and this ritual just completes the hour. This first hour is now over, it's gone so it's now what? HISTORY. Since it's history, we want to LET IT GO, get refreshed at the break, and come back ready for the next learning session. Here's how we do it, Put your left foot out in front of you, and the right foot back. You don't shake it all about. Now, raise your left hand and bring your right hand back, Sweep your right arm forward and bring the hands together in a clap. Now, we add a sound. You're on a horse and it's racing to the edge of a cliff. What do you say? WHOA! Let's put it all together. The first hour is what? HISTORY. Let's let it go and take a 10 minute break. WHOA...CLAP! WHOA...CLAP! Now, the first hour of the Accounting Game is what? HISTORY ...Let's let it go and take a 10 minute break. WHOA...CLAP! See you in 10 minutes!"

What You Do:	What You Say:
(Lead the class in gentle and non-threatening stretches)	RETURN “We also begin each hour with a ritual. Will everyone please stand. We are going to stretch a little.” Stand with your feet about shoulder width apart, arms by your side. Take a deep breath and bring your arms up over your head. Clasp your hands together, let the breath out and drop your hands down in front of you. Feel that stretch in the front of your shoulders. Now, take another deep breath, bring your arms up again. This time as you let the breath out, drop your arms behind your back, clasp your hands and pull the shoulders back. Feel that stretch. Now let’s just roll the shoulders-up, back, and down; again-up, back, and down; land one more time-up, back, and down. Take your seats.

What You Do:	What You Say:
Step # 3 READ. Put in actual quote. DEMONSTRATE making lemonade. First with real lemons and sugar at the stand, then with participants using game pieces. PLAY- use sound effects! Get people to mix up lemonade with their game pieces. Take off yellow Five and white One and shake them up.	Step # 3 Turn your books to the next page, number 5. Go to number 3. "You now make up a batch of lemonade." "50 lemons plus 5 lbs. of sugar plus 2 gallons of water equals 60 glasses." How do you make lemonade?... Aud. Resp. So you need to take what? LEMONS How many lemons? FIFTY LEMONS. How much sugar? FIVE POUNDS. And two gallons of water to make up 60 glasses. Now, what do we have to do?...SHAKE IT UP...And here it is, 60 glasses of lemonade. Let's demonstrate that on our game boards. So pick up your lemons and your sugar game pieces. So let's mix 'em up. Remember: Participation is the key to your what? Right, Success! Let's all make a shaking sound....chsss, chsss, chsss

What You Do:	What You Say:																
Put back yellow Five and yellow One together as a batch. <table><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr></table>  SNAPSHOT - Have someone in audience take a picture of you up at the game board. RECORD in game books. Bring group back together. <i>Take a deep breath</i>																	Now what happens to our sugar? IT DISSOLVES And what color does it turn to? YELLOW Now, what do we have? LEMONADE! Right! Does everybody see that? Has anything changed on our scorecard? YES! So we need to take another what? SNAPSHOT Let's take a snapshot. And a snapshot's good for when? RIGHT NOW OK, now copy what's on your game boards right into your books. Is everyone finished? Let's all take a nice deep breath.
																	
																	

What You Do:	What You Say:
Go over #'s with entire class, out loud. Drop down to Cost of Production Be conversational, not using strong questions. Because you've already covered this material with them. Fill out with them. MATH PHOBIA - PLAY! Pause before you say "this is as tough as it gets."	What are our total assets now? SEVEN DOLLARS Total liabilities and owner's equity? SEVEN DOLLARS Does the left side equal the right side? YES Good Job! One thing we know is that the left side ALWAYS, ALWAYS, ALWAYS equals what? THE RIGHT SIDE! Your cost of production is...so let's go ahead and fill that in. 50 lemons at 10 cents each is . . . ? FIVE DOLLARS 5 lbs. of sugar at 20 cents a pound is . . . ? ONE DOLLAR + 2 gallons of water, no charge. So, 60 glasses costs us . . . ? SIX DOLLARS Now we want to figure cost per glass. Your cost per unit or per glass is: Cost of production? SIX DOLLARS Divided by the number of glasses? SIXTY So, the cost per unit or glass is how much? 10 CENTS! Now, for those of you who think you might have difficulty with numbers or think you have math phobia.....(pause).....this is as tough as it gets! So, there's no problem. Let's all Take a deep breath

What You Do:	What You Say:
EXPLANATION of Left Brain/Right Brain theory. Turn over L. Brain/R. Brain flipchart page. Deliver info quickly. Someone in class answers, acknowledge them, and quickly deliver info. Motion to sound person to raise volume up on music for one moment.	Now, we are going to be demonstrating all of our transactions on the game board, and then recording what we did in our books. So, we'll demonstrate on the board, then record the information in our books, and we'll do this all day long. I said I would talk about how we are teaching this course. I know that you have all heard of the left brain/right brain theory. Am I right? Audience response. Thank you. I'd like to do a quick review of the learning functions of the left and right brain. What does the left brain do? Audience response. Yes, the left brain is generally thought of as being more linear. It's logical, analytical and sequential. You know, like A, B, C. It is said to govern the functions of reading, writing, arithmetic and language. If the left brain is all of the things just mentioned, then the right brain is thought to govern what types of thinking and learning functions? Yes, it's generally thought to be the more creative side of the brain. The right brain is stimulated by color and graphics, movement, breathing and relaxation. Emotions and music are powerful catalysts for right brain functions. We will be playing music in the background all day long to further relax you while stimulating the whole brain. So, you will be involved visually, auditorily and physically. Overall, what we will be doing is actually stimulating the whole brain and the whole person. The learning methodology that you will be experiencing is called 'Accelerative Learning' and it is designed so that you will be able to take a quantum leap in your ability to discover everything you need to know about the basics of accounting. Some people call this superlearning.

What You Do:	What You Say:
Right Brain Demonstration/Left Brain Recording  Let them answer.	Now, we're going to demonstrate everything on our scorecard moving all of the colored pieces, which is what kind of brain function? Right brain! It's the physical involvement using color and graphics. And then we'll translate what we did back into our game books which is what kind of function? Left Brain! So what we're going to do all day long is the right brain demonstration, then left brain recording into our game books. So all day long we'll be using LB, RB, LB, RB, LB, RB, LB, RB and by the end of the day we will all be what? INTEGRATED or using our whole brain. Please Take a deep breath Also I have this boring habit of asking you to repeat answers to questions that I must know by now. Why am I doing that? What's in it for you?

What You Do:	What You Say:
Step #4 Bring out "Business is good and you feel great" sign. READ - actual quote here. Fill in sales of \$15 and STOP! Demonstration. First go over to your stand and get the pitcher of lemonade and pretend to pour glasses as you talk about kids coming in to buy lemonade. Then demonstrate on game board. Yellow Five goes out of INVENTORY (Make drinking sound effects; glug, glug, glug.)	Step #4 Now turn your books to page seven. Business is what? Good. And how do you feel? Great. "You have sales of fifty glasses of lemonade at thirty cents a glass for" how much? FIFTEEN DOLLARS Okay, so fill that in and STOP right there. Don't go any further. Let's demonstrate that on your game boards. What's the first thing that needs to go out? INVENTORY So demonstrate that. How much inventory? All of it? FIVE DOLLARS Do we still have inventory left on our stand? ABSOLUTELY How much? ONE DOLLAR

What You Do:

\$15 in **CASH** comes in:

Do **DISCOVERY** here with class, being eight years old with them. Lead with questions.

Continue demonstration on game board.

DISCOVERY

Put up black Ten on right side.

What You Say:

So go ahead and demonstrate this.

Out goes fifty glasses—glug, glug, glug, our friends drink up the lemonade!

And what comes in? **CASH**

How much cash? **FIFTEEN DOLLARS**

So how much do we have on the left now? **SEVENTEEN** Wow, that's a lot!

Oh my, and on the right how much do we have? **SEVEN**

We only have \$7 on the right side.

Does the left side equal the right side? **NO**

How much more do we have on the left side? **TEN DOLLARS**

Does someone have to own that \$10? **YES**

Who owns it? **WE DO**

What color will it be? **BLACK** So, let's add \$10 right here on "the bottom line"

So, how did we come to that? We brought in how much? **\$15 IN SALES**

Did it cost us any product to produce those sales? **YES**

How much? **FIVE DOLLARS**

So is that \$10 the amount over and above our cost? **YES**

What do we call that? **PROFIT, EARNINGS**

What You Do:

Hold up Earnings Week To Date label and add to scorecard:

Handle all audience questions

Take a deep breath

Fill out equation on page 7

$$\begin{array}{r} \text{Sales} \\ - \text{Cost of goods sold} \\ \hline = \text{Earnings, so far} \end{array}$$

What You Say:

And when did we make those earnings? Which week? Right, this week! What do we call this? Right! Earnings Week To Date.

So pick up your label that says Earnings Week To Date and put it on what line?
THE BOTTOM LINE

So the official title is year-to-date, but we're going to take a few liberties with our game and play it in weeks. So every week we're going to reflect our earnings for when? Just for the week that we're in.

Now, any questions so far?

Take a deep breath!

Okay. Now, go back to your book and look at the equation on page 7. There are three things to look at each time we have a sale: 1) Sales minus 2) cost of goods sold equals 3) earnings, so far. So our sales minus the cost of goods sold equals earnings so far.

Fill this in: So sales of 15 minus cost of goods of 5 equals our earnings so far which are?
TEN DOLLARS

Now, how much is on the left side? **SEVENTEEN DOLLARS**

How much is on the right side? **SEVENTEEN DOLLARS**

And, when did we earn these earnings? **Right!** This week.

And, who do they belong to? **US!**

What You Do:	What You Say:
Open room up to handle any questions. SNAPSHOT  RECORD in game books. Bring everyone back together. <i>Take a deep breath</i> Do physical congratulations together. Teach them principal physical congratulations!	Does everyone see how this worked? Please ask any questions that you have. Are there any questions so far? Thank you! Has anything changed on our scorecard? Yes, you bet it has! So we need to take another snapshot of our scorecard for when? RIGHT NOW So fill out your financial statement on Number 4. Go ahead and fill it out: Take a deep breath. What are our total assets now on the left side? SEVENTEEN DOLLARS Total liabilities and owner's equity? SEVENTEEN DOLLARS Does the left side equal the right side? YES The left side always, always equals what? THE RIGHT What do we have on the stand? \$16 cash, \$1 in lemonade. Congratulate your neighbors

What You Do:	What You Say:
Demonstrate the Three R's: Reality Reflection Record Reality: Pick up cigar box and lemonade and show props while explaining what's out on the stand. Reflection: Carry cigar box and pitcher over to the left side of the game board. Record: Walk over to the right side holding the props....  <i>Take a deep breath</i>	The things and stuff on our scorecard, do they exist some place? somewhere in reality?... YES Where? OUT ON THE STAND How much is in the cigar box?...\$16... How much is in the pitcher?.....\$1 or ten glasses of lemonade Does the left side of our scorecard reflect what's out on the stand? Do these pieces represent the things and stuff that we really have down at the stand? YES Is this the reality of our business, that we now have \$16 in cash and ten glasses of lemonade? Let's go over to the scorecard. Now the left side of our scorecard...pretend it is a mirror. What does a mirror do?...REFLECTS...So do these pieces reflect this reality? Does the cash reflect what's in the cigar box? And does this one dollar reflect what is in the pitcher?...YES... The right side shows us what? WHO OWNS THE THINGS ON THE LEFT SIDE So who owns the things in our business? Mom owns \$5; And we own \$12. So, Mom's the Liability and we're the what? OWNER'S EQUITY So the left side of our scorecard is a reflection of what we have in the business and the right side shows us what?...WHO OWNS IT... So is this right side just a RECORD on paper of who owns our assets?...YES... Is there any cash or lemonade represented on the right side? NO It just show us what? WHO OWNS the Cash and Lemonade. This whole scorecard is just on what? ON PAPER.. it shows the things you have in the business and who owns them!! So we have the three R's of the accounting game: Reality, Reflection, Record. Take a deep breath

What You Do:	What You Say:
Bring out first Accounting Rule. REMEMBER: ASSETS = LIABILITIES + OWNER'S EQUITY  Explain tying string around finger to remember. Out loud, all together. Switch hands and repeat again out loud! <i>Take a deep breath</i>	Remember when you were a kid and your mom wanted you to remember something, she told you to tie a string around your finger. We want to remember the basic accounting equation. So we have a physical way to guarantee that this equation is LOCKED IN YOUR MEMORY FOREVER. Hold up your finger, tie that imaginary string around it and let's say this together. Remember: Assets = Liabilities + Owner's Equity. To make sure we have it, let's do it with the left finger. Remember: Assets = Liabilities + Owner's Equity. Let's all take a deep breath now.

What You Do:

Read out loud

Play with Mom on glass rental, and kid sister/brother for advertising and Mrs. McG. for rent expenses.

This is your opportunity to play – embellish this part using your own style as an 8 year old kid.

Punch Line!

What You Say:

Step #5

Let's turn our books to page 9.

"Now you still have some expenses to pay, so you pay in Cash".

Glass Rental, 2 dollars. Mom's what is this for? Two dollars for glass rental? ...Resp.. Now those glasses that Mom loaned to you? You washed them real well and made sure none of them were chipped, and you returned them very carefully to Mom. But guess what Mom did? She charged you for what? **GLASS RENTAL** for \$2! Boy, Mom, are you being tough! I think mom sees we are making a profit and she wants a piece of the action.

And your sister, the one who made the sign for your lemonade stand. She saw that your were making all this money so now she wants a piece of the action! She charges you for what? **ADVERTISING** for \$.50

And being that you're such a good entrepreneur you realize that you need a good spot for your stand. So you comb the neighborhood on your bike looking for the best spot. You finally decide on a corner, right at the top of a hill where you know all the kids ride by on their way to the candy store. But guess what? It's in Mrs. MacGillicutty's front yard and she charges you what? **RENT** for \$.50.

But you decide to pay it because you realize that in business location is what?
EVERYTHING!

So now you have total expenses of how much?

What You Do:

STOP!

Class **DEMONSTRATION**
Take \$3 out in **CASH**

DISCOVERY

Play with Mom

DISCOVERY!

What You Say:

So, fill that in and now let's demonstrate that on our scorecards.

So what do we have to do now on our scorecard?

What goes out? \$3, Okay, so take out \$3 in cash and pay Mom, your sister or brother and Mrs. McG.

Does the left side equal the right side? Oh, no!

How much do we have on the left side? **FOURTEEN DOLLARS**

How much on the right side? **SEVENTEEN DOLLARS**

Does the left side equal the right side? **NO**

What do we need to do? Take \$3 off the right side? How about taking it out of the \$5 we owe Mom? How about it Mom?

How about the Original Investment? Does that need to stay the way it is? **YES**

What will the expenses reduce? **EARNINGS**

And so our earnings go down by what? **THREE DOLLARS**

Now these costs, the glass rental, advertising and rent, they're what? do we have these costsexpenses whether or not we sell any lemonade?...**YES**....Are they costs just to keep our stand open for business on the sidewalk? Yes! So, they're the cost of doing what? **BUSINESS!** And a cost of doing business is called what? **AN EXPENSE.**

Do we have these expenses whether we sell any lemonade or not? **YES!**

What You Do:	What You Say:																
Reduce Earnings Week to Date by \$3 <table><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td></tr></table> SNAPSHOT  RECORD in game books. <i>Take a deep breath</i>																	And expenses ALWAYS, ALWAYS, ALWAYS reduce what? EARNINGS So, expenses always reduce our earnings. Which week's earnings? THIS WEEK'S EARNINGS So anytime you have an expense you're going to come down here and reduce what? EARNINGS Now, does the left side equal the right side? YES Good Job! So has anything changed on our scorecard? It sure has! Let's take a snapshot. And remember a snapshot's good for when? Right Now. Please record what we just did in your game books under #5. Everyone come back, and let's take a deep breath! So what are your total assets? FOURTEEN DOLLARS Total liabilities and owner's equity? FOURTEEN DOLLARS Does the left side equal the right side? YES The left side always, always equals what? THE RIGHT Great Work, Everyone!
																	
																	

What You Do:	What You Say:																				
READ Play with Mom - Be open and intimate. Punch Line! Class DEMONSTRATION Presenter DEMONSTRATION <table><tr><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr></table>																					STEP #6 Now turn your game books to page 11. “You still owe Mom five dollars and you pay back the loan.” “Mom, here’s the five dollars back that you loaned to me. I did good, huh! Aren’t you proud of me? I’m so excited Mom and I’m so proud.... Can I have a hug! Oh, good, thanks a lot.” Now, Mom doesn’t charge you any what? INTEREST! She just wants a big what? A BIG HUG So let’s demonstrate what just happened on our scorecards. You demonstrate this first. What comes out? FIVE DOLLARS In what? CASH Does the left side equal the right? NO
