

How do people really learn? The answers and theories are endless. They include ideas ranging from genetic imprinting to osmosis and modeling and emotional intelligence. Brain research is voluminous as we go into the 21st century. A later book in this series will deal with the scientific basis of that research and how Educational Discoveries uses that research to work with corporations to achieve extraordinary results.

How do you learn? Isn't that an interesting question? And, what do you learn? Do you learn information from reading, watching videos, through computers? Can you learn people skills without people? Can you change behavior without a model of what that behavior should look like? Feel like? Are there people you meet in your daily travels that you want to emulate? Do you? How does it work? Can you remember the words of the songs of your childhood and not the ones you listened to last week or even this morning? And, remember what we heard about a baby's first year of life? They learn more in that year than in all the years combined afterwards. So, what does this have to do with you and this book? Good question.

"The Accounting Game" is written to create a specific learning experience for you as well as teach you the basic skills of Accounting. We call the learning method accelerative learning. What do you think that means? It is a learning methodology that uses all of your senses as well as your emotions and your critical thinking skills. If you can remember your kindergarden or elementary school classrooms, you will see many colored maps, letters and numbers, drawings from each child, etc. You learned the alphabet by singing,. You learned the multiplication tables by saying them out loud with each other. You laughed a lot. You were creative. It began to change when you entered middle school or high school. Learning became more lecture, more black and white, more rote. You studied before tests and probably did well or maybe not.

Most of the information you learned in high school you don't remember now. That's because it went into your short term memory so that you could pass the tests and move on to the next grade. While in elementary school, much of the information you learned went directly to your long term memory, because it was peppered with music, color, movement, smells, emotional experiences and lots

of play and fun.. The methodology we use in this book in many ways parallels how you learned in grade school. We do this by accessing the part of your brain where long term memory lives. Now, the way to reach your long term memory has to include emotion, because they reside in the same place in your brain --- The Limbic Brain.

Because of the way we humans learn, we have to discover something ourselves to really learn it.

How could a subject like accounting become the most successful accelerative learning financial seminar in America. Over 70,000 people have participated in *(The Accounting Game - we should use the font of the accounting game.)

TAG Book Forward

Business people and students have over the years found the subject of accounting quite difficult to master. Many have simply given up in frustration, others have decided to leave accounting to the "experts." This book is for all of you who have hated accounting, had difficulty learning it, or ever thought you didn't really "get it."

I think that most attempts to teach accounting fail because of over attention to details and a failure to present the big picture framework of how it all works and fits together. In this book we promise not to over burden you with details and to focus on what are really the key concepts of accounting that any business person needs to know. You will learn the structure and purpose of the three primary financial statements—the balance sheet, the income statement, and the cash flow statement. You will learn how these fit together and their interrelationships. You will also learn the basic language of business—concepts like cost of goods sold, expenses, bad debts, accrual vs. cash methods of accounting, FIFO and LIFO, capitalizing vs. expensing, depreciation, and the difference between cash and profit.

Our promise is that you will get all this information in a fun and easy way that allows you to participate, interact and discover all that you need to know. Many people need to have understanding and confidence in working with financial concepts, but are not ever going to be doing accounting details. If that is you, then this book is for you. It is set up so that you can actually do financial statements as you are learning them. I invite you to "play the game" as you are reading the book.

Understanding all this information is nice, but what do you do with it? The final chapter will give you some tools for analyzing financial information and making better decisions for your company and your career.

The information in this program has been developed by Educational Discoveries, Inc. since the early 1980's in our one day seminar, *The Accounting Game*®. The program was originally created by Marshall Thurber at the Burklyn Business School in the late 1970's. Nancy Maresh, a student at Marshall's school, then took the program and developed *The Accounting Game* seminar. We offer our heartfelt thanks for their original genius and commitment to bringing this extraordinary program to life. We also want to thank all of the somewhere between 75,000 and 100,000 people who have attended our public and private seminars for the fun they have been and for the insights and suggestions that have helped us improve the teaching of this information.

Jude,
Here is my rough
draft of a forward to
the TAG book.
D

Educational Discoveries (EDI), the accelerative learning and training company, and Source Books, the nation's fastest growing independent publisher, announce today a joint venture in the development of a business topic book series based on EDI's accelerated learning techniques.

The first book published will be *The Accounting Game*. *The Accounting Game* book is based on the world's most successful one day financial seminar, with almost 100,000 graduates, is co-authored by EDI's top presenter, Darrell Mullis and EDI's CEO Judith Orloff

Orloff expresses excitement about EDI's newest enterprise. [ADD QUOTE] Based in Boulder, Educational Discoveries, has 40 employees and is considered by most experts to be the training industry leader. EDI has recognized that content needs to be taught in a contextual relationship to the emotions. By fully understanding the emotional character of companies and its employees, and the merging of content and context that has satisfied the needs of such clients as NationsBank, Wellbridge (a division of Monsanto), Grainger, Ingersoll-Rand and Mobil.

The series is expected to create a lively and highly effective alternative to the Dummies and Idiots series. [ADD QUOTE FROM SOURCE]

Darrell Mullis, who has taught *The Accounting Game* over 300 times, says "that many people need to have understanding and confidence in working with financial concepts, but are not ever going to be doing accounting details." Mullis adds "if that is you, then this book is for you. It is set up so that you can actually do financial statements as you are learning them. I invite you to "play the game" as you are reading the book."

The book will be launched at the ABA in Chicago during Memorial Day weekend. [ADD QUOTE FROM ORLOFF AND SOURCE] With high expectation for the series, the first printing will be [AMOUNT] Source Book feels that the publication will make a major impact in the business world.

Todd-- Best call Judith directly (303 786-8100, #127). I listed Darrell first because he's the Subject Matter Expert on this one, and isEDI's top presenter (and, therefore, a natural choice for publicity). My best guess, though, is that Judith and Darrell both want to be active with the publicity--Judith with "big picture" EDI (accelerative learning, emotional literacy, and JOLT--Judith Orloff Learning Technologies)and Darrell specifically with this title. Thanks, LB
