

Statement of Purpose –

Has it been easy for you to change a negative habit such as stopping smoking or giving up sugar? Have you found it easy to change how you respond in your personal and professional relationships? Most of us have a difficult time making changes. In fact, in many cases, we tend to gain weight after giving up smoking and repeat our relationship patterns no matter what relationship we are in. I believe this is due to our childhood conditioning.

I have been steadfast in my pursuit to find a key to unlock the childhood conditioning that follows us throughout our life. That pursuit brought me to Fielding.

My purpose for attending Fielding is to create a program that will teach children how to transcend their childhood conditioning so that they are open to many possibilities, using a unique change model I call Disruptive Learning Technology (DLT). I have a patent pending on this process as well as an app, DeepSee, in the Apple Store. My

goal is to have this process integrated into the public school curriculum along side subjects such as Math or English.

This model came from my own sense of the futility at attempting to change my own patterns. Once one aspect of a pattern changed, it was like pulling a thread on a tapestry that had no end. It became a never-ending cycle, which required continued maintenance and outside support. I spent many years working on my own childhood conditioning, including becoming a nondual and transpersonal psychotherapist, as well as leading workshops and groups throughout the world. I understood that a new model of self-awareness was needed that could simultaneously unlock our childhood conditioning and embed new neural pathways through a repetitive process that could be duplicated and taught. I have been able to test my work with students, peers, in teacher trainings and have collected data from four focus groups and a random sampled questionnaire of 1000 people.

Over the past 40 years, whenever I have been tempted to continue my studies and pursue a terminal degree, I didn't see a

path that would allow me to achieve my dreams. I also knew I wanted to make a contribution that was practical and well researched and tested.

Six months ago, I discovered Fielding on the Internet. It was the only University that felt like a good fit. Of course, I can only posit how the program curriculum for the EdD will support my ultimate purpose of creating DLT for students of all ages and backgrounds in the school systems.

The doctoral program's commitment to social justice together with the academic foundations of leadership, the various classes and their approaches to inquiry and effective communication speaks to my heart and mind. I wish to be part of a cohort of like-minded students and a faculty that mentors and participates in supporting me to be the best I can.

Finally, when I realized my work up until now in DLT could be used in my dissertation exploration, I began my application that evening.

June 2, 2016, Self Reflective Essay- Fielding Graduate University

My journey to Fielding Graduate University began in 1971 while working at the University of Pennsylvania. I met Dr. Steward LaCasce through a serendipitous meeting. He was interviewing Directors of the University Year for Action program for chapters in his book on volunteering. After a few meetings, he offered me the opportunity to be an integral part of a team to create an alternative college in Burlington, Vermont.

The Vermont Institute of Community Involvement (VICI) was designed to offer a new model for adult learning; a college without walls, utilizing accelerative and action learning, with the intent of reaching students emotionally and kinesthetically as well as through academic rigor.

VICI became Burlington College, and until the end of May 2016, when the school closed, it stood tall as an institution that focused its energy on students who would ordinarily not have the opportunity to graduate college. We supported students at Burlington College to be a positive force for social change and educational transformation.

This opportunity was made for me and brought me many years of joyful learning. I was honored to participate in creating a school and to have a work opportunity that allowed me to feel right at home.

I believe the traumatic incidents in my childhood led me to be a co-founder of Burlington College. Ever since I was a small child, I had seen the world slightly askew from my family and friends. For example, I thought Cinderella's stepsisters got a raw deal and I never aspired to be Cinderella. I remember my mother telling me that if weren't the only child born in the hospital the night I arrived; she would swear I wasn't her child. I was unable to just accept what people said. I have always been deeply curious about why people think the way they do. I ask questions that are very personal. I have always yearned for a deep connection with everyone.

When I joined this small group of dedicated social activists, academic scholars and practitioners, I had the chance to satisfy my yearning. I moved my two young children to Vermont, and within a week was teaching a class called "Male and Female in Sexist Society."

My students were a mix of prison guards, Vietnam vets, hippies and feminists of the 70's whom in the beginning met in my living room. The teaching was a combination of poetry, history, art and writing. We also interviewed local businesses, government agencies and random individuals who were walking on the mall. The Burlington Free Press, the local paper, came to one of our classes and featured the students in the Sunday paper.

In September of 2015, the President of the college, Carol Moore, asked me to deliver the convocation speech for the new, incoming students and faculty. In preparation for that speech, I reflected back to what being a co-founder of this extraordinary college meant to me.

Burlington College was dedicated to alternative education. This meant I could experiment with new ways to teach. For example, a biologist and I created a class that combined psychology and biology. We trekked the rivers and lakes in Vermont, examining the inhabitants of the area and then sat under trees writing our observations, experiences and feelings about what we were doing.

When I went to college, I could barely sit still in classes and listen to lectures. The students were able to use their writing skills, meditate, and learn the biology of the area all in one class. Each day felt like a new universe unto itself and I loved seeing the connections between our human psychology and the psychology of the earth.

I have always craved connection as well as knowledge and information, and didn't know if this was possible in education until I was at Burlington College. I understood that without connection, correction and feedback couldn't really open the heart and mind. I began to understand that asking for connection or intimacy without demonstrating it personally was a source of conflict in all relationships. Consequently, when given the opportunity at Burlington College, I experimented with what is now called action learning, rigorous academic criteria and began to develop my own model of connection and intimacy. I recognized that connection is seminal to memory and long-term learning.

While at BC, I created programs and classes that allowed students to discover their heart opening as well as develop their

academic readiness. I also was able to prepare myself for the next chapter in my professional development.

The last summer I was there, I created and directed a program called Noogenesis that was held at Shelburne Farms in Vermont. We brought in master practitioners in the Alexander Technique, Feldenkrais, Gestalt Therapy, Rolfing, Bioenergetics, Aikido, Tai Chi and much more. As the director, I participated in all the programs. For the first time, I realized how important our body was in our healing. That summer convinced me that our mind-body was not separate and I found a new respect for the wisdom of the body. The trauma that began for me as a child in my family was just waiting to be recognized. As the summer ended, I knew it was time to move on from Burlington College and begin my practice as a psychotherapist.

My journey since then has brought me here to Fielding Graduate University. I wanted to discover a key to release trauma, and a simple method to clarity, so we could unlock our childhood conditioning.

For over forty years, I have been sharing my methodology with colleagues, corporations, families and individuals. I call my theoretical orientation Disruptive Learning Technology, DLT. I am an owner of a patent pending for DLT and have an app called DeepSee in the Apple store. I wish to spend the next few years of my life putting this into a form that can support the development of young minds to counteract their negative conditioning so they can live in a safe, openhearted society and offer their unique gifts and talents to support social change and transformation.

I have decided that Fielding Graduate University is the next step in realizing my dream of bringing DLT to public education and individuals who wish to be connected on all levels.

Judith Orloff is an Executive Coach, Master Facilitator, Trainer of Trainers, and published author with 25 years of experience in areas of coaching, leadership, organizational development, emotional intelligence and strategic change. Her expertise lies in connecting individual, professional and organizational learning with a strong bottom line. For over 35 years, Judith has assisted individuals, organizations and fortune 500 companies achieve extraordinary results in their goals and vision. She is President of Orloff Learning and Real Impact Learning, both located in Boulder, Colorado.

Professional Experience

- Horizon House, a psychiatric half way house located in Philadelphia in the early 70's, where she studied with experts in the fields of family therapy and systems theory.
- University of Pennsylvania, as director of the University Year for Action Program, and taught in the Urban Studies Department as an adjunct professor
- Co-founder of Burlington College as part of executive team and developed Noogenesis, a transpersonal psychology B.A. Program, and counselor
- Co-founder and President of Carriage House Associates in Health, a holistic health center in Burlington, Vermont where she was also a psychotherapist
- Founder of Choices, International, a personal growth seminar company teaching in the United States, Europe and Australia
- Co-founder of Educational Discoveries, an international design and development company employing over 70 people. The company was eventually sold to Provant,
- President of Orloff Learning and Real Impact Learning. Orloff Learning offers programs to individuals and Real Impact Learning offers Leadership programs to entrepreneurs and organizations.

Some business initiatives:

Facilitating and speaking to over 1500 people internationally

Lead the team which designed and implemented a three tier leadership development program for over 10,000 participants at bank of america

Coaching senior executives internationally

Led team that designed developed and successfully implemented and created culture for wellbridge intern. A world class fitness organ

Designed and facilitated executive team retreat

Designed developed and presented seminars and programs on leadership, emotional
intell and culture change
